PCM-3835
IDE Flash Disk Carrier Module

Initial inspection

The PCM-3835 has been inspected both mechanically and electrically before shipping. It should be free of marks and scratches and in perfect electrical order upon receipt.

Handle the board only by its edges. The static charge on your body may damage its integrated circuits. Keep the card in its anti-static package whenever it is not installed. You can use this package to return the card if it should need repair.

Features

- Three methods of power entry:
  1. Standard 4-pin power input
  2. PC/104 connector
