Packing List

Before you begin installing your card, please make sure that the following materials have been shipped:

- GENE-A55E CPU Card
- DVD-ROM for manual (in PDF format) and drivers

If any of these items should be missing or damaged, please contact your distributor or sales representative immediately.

General Information

1.1 Introduction

AAEON, a leading embedded boards manufacturer, is pleased to announce the debut of their new generation 3.5" SubCompact Board — GENE-A55E.

GENE-A55E adopts AMD G-Series T16R single core processor. The system memory is deployed with 204-pin SODIMM DDR3L 1066MHz up to 4 GB. In addition, Realtek® RTL8111E supports 10/100/1000Mb LAN that allows faster network connections.

The display of GENE-A55E supports VGA/LCD, simultaneous and dual view displays. This model applies Mini Card slots and 1x optional mSATA for flexible expansions. USB2.0 x 4, COM ports x 4 (RS-232 x 2, RS-232/422/485 x 2) are configured on the GENE-A55E as well. Full functions make GENE-A55E a flexible and user friendly solution. This brand new SubCompact board is developed to cater to the requirements of Automation, Medical, ticket machine, transportation, gaming, KIOSK, and POS/POI applications.

1.2 Features

- AMD G-Series Single Core 615MHz Processor
- AMD A55E Chipset
- DDR3L SODIMM, 1066MHz Memory Up to 4 GB
- VGA, 18/24-bit Dual Channel LVDS LCD
- 2CH HD Audio
- SATA 2 & CFD x 1
- PC/104 Interface Support
- Gigabit Ethernet x 2
- Supports Digital I/O 8-bit, USB 2.0 x 4, COM x 4, LPT x 1
- Mini-Card slot x 1
- +5V DC Input, AT/ATX

1.3 Specifications

System

● Processor	AMD G-series T16R single core 615 MHz
● System Memory	204-pin DDR3L 1066MHz SODIMM x 1, Max. 4GB
● Chipset	AMD A55E
● I/O Chipset	Fintek 81866D-I
● Ethernet	Realtek RTL8111E 10/100/1000Base-TX, RJ-45 x 2
● BIOS	AMI BIOS
● Wake on LAN	Yes
● Watchdog Timer	Fintek 81866D-I
● H/W Status Monitoring	Supports power supply voltages and temperature monitoring
● Expansion Interface	Mini-Card slot or mSATA(Optional) x 1 LPC Bus x1
● Power Requirement	+5V(Default), AT or ATX
● Power Consumption (Typical)	AMD T16R, DDR3 1333 4GB, 2.2A@+5V

● Board Size	5.75" x 4" (146mm x 101.6mm)
● Gross Weight	0.88 lb (0.4 kg)
● Operating Temperature	32°F ~ 140°F (0°C ~ 60°C)
● Storage Temperature	-40°F ~ 176°F (-40°C ~ 80°C)
● Operating Humidity	0% ~ 90% R/H, non-condensing

Display

● Chipset	AMD G-series T16R processor integrated Graphics Engine
● Memory	Shared memory: 512MB/ DVMT 5.0
● Resolutions	VGA up 1920 x 1200, LCD up to 1920 x 1200 (By Chrontel CH7511)
● LCD Interface	18/24 bit Dual Channel LVDS LCD

I/O

● Storage	SATA 2 x 1
● Serial Port	RS-232 x 2, RS-232/422/485 (auto flow) x 2
● Parallel Port	SPP/ECP/EPP mode x1
● USB	USB 2.0 x 4

● PS/2 Port	Keyboard x 1, Mouse x 1
● Audio	Line-in, Line-out, Mic-in
● GPIO	Up to 4 in and 4 out

SubCompact Board

GENE-A55E

Chapter

2

**Quick
Installation
Guide**

2.1 Safety Precautions

Warning!

Always completely disconnect the power cord from your board whenever you are working on it. Do not make connections while the power is on, because a sudden rush of power can damage sensitive electronic components.

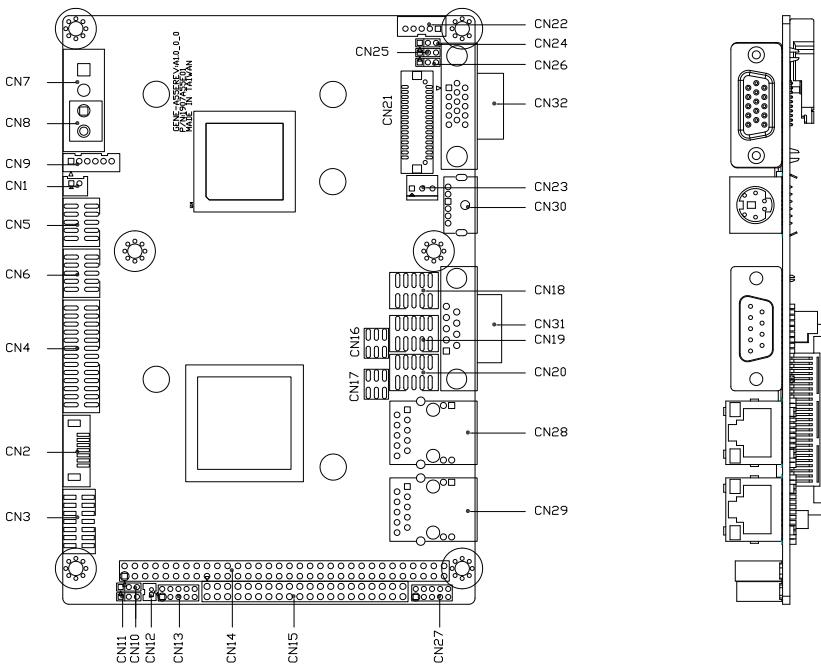

Caution!

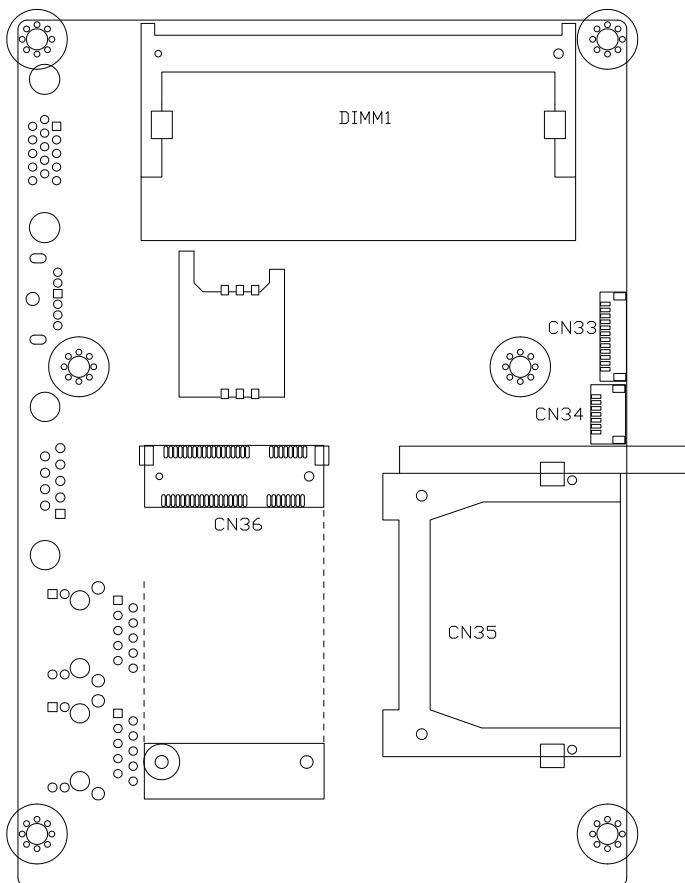

Always ground yourself to remove any static charge before touching the board. Modern electronic devices are very sensitive to static electric charges. Use a grounding wrist strap at all times. Place all electronic components on a static-dissipative surface or in a static-shielded bag when they are not in the chassis

2.2 Location of Connectors and Jumpers

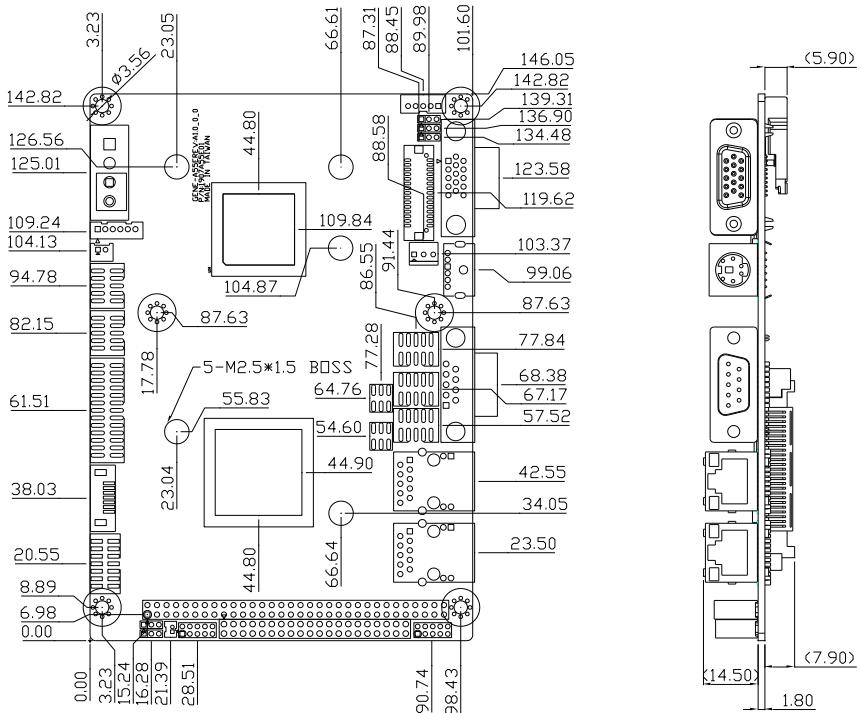

Component Side

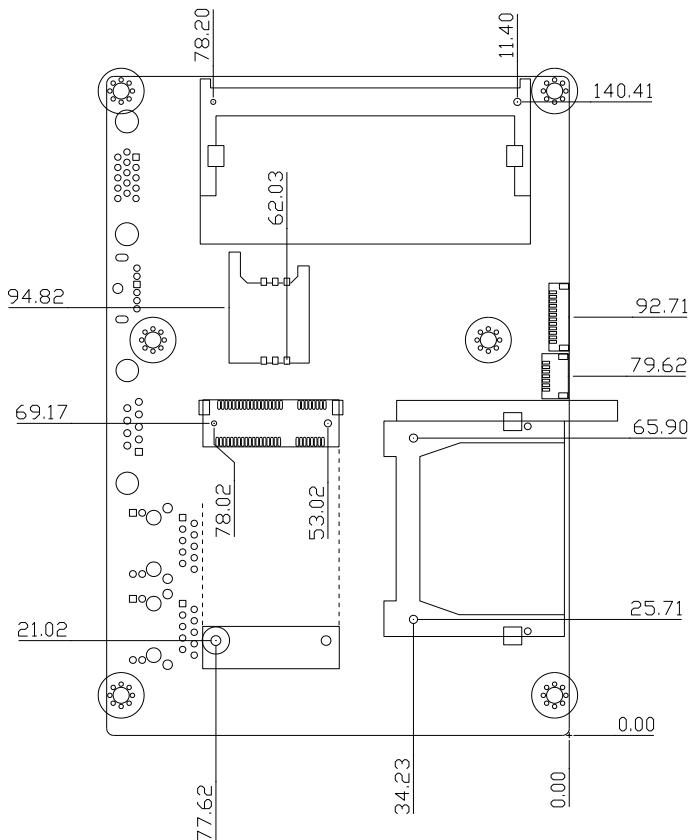

Solder Side

2.3 Mechanical Drawing

Component Side

Solder Side

2.4 List of Jumpers

The board has a number of jumpers that allow you to configure your system to suit your application.

The table below shows the function of each of the board's jumpers:

Label	Function
CN10	AT/ATX Power Supply Mode Selection
CN11	Clear CMOS Jumper
CN16	COM3 Pin9 Function Selection
CN17	COM2 Pin9 Function Selection
CN24	LVDS Backlight Inverter VCC Selection
CN25	LVDS Backlight Lightness Control Mode Selection
CN26	LVDS Operating VDD Selection

2.5 List of Connectors

The board has a number of connectors that allow you to configure your system to suit your application. The table below shows the function of each board's connectors:

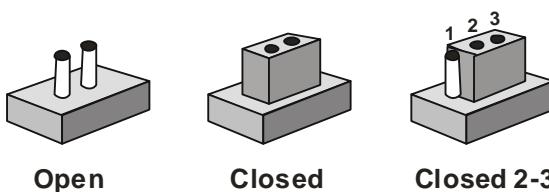

Label	Function
CN1	+5V Output for SATA HDD
CN2	SATA Port Connector
CN3	Audio I/O Port
CN4	LPT Port
CN5	USB 2.0 Ports 3 and Ports 4
CN6	USB 2.0 Ports 1 and Ports 2
CN7	4P Power Connector Input
CN9	External +5VSB Input
CN13	Digital IO Port
CN14+CN15	PC/104 Slot
CN18	COM Port 4
CN19	COM Port 3
CN20	COM Port 2
CN21	LVDS Port
CN22	LVDS Inverter / Backlight Connector
CN23	System FAN
CN27	Front Panel Connector
CN28	Realtek LAN (RJ-45) Port 2

CN29	Realtek LAN (RJ-45) Port 1
CN30	Mini-Din PS/2 Connector
CN31	COM Port 1 (D-SUB 9)
CN32	VGA Port
CN33	LPC Port
CN34	SPI Flash JTAG
CN35	CFD Slot
CN36	Mini-Card Slot
CN37	UIM Card Module
DIMM1	DDR3L SO-DIMM Slot

2.6 Setting Jumpers

You configure your card to match the needs of your application by setting jumpers. A jumper is the simplest kind of electric switch. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To “close” a jumper you connect the pins with the clip.

To “open” a jumper you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2 or 2 and 3.

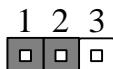

A pair of needle-nose pliers may be helpful when working with jumpers.

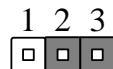

If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any change.

Generally, you simply need a standard cable to make most connections.

2.7 AT/ATX Power Supply Mode Selection (CN10)

AT Mode (Default)

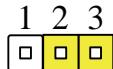

ATX Mode

CN10	Function
1-2	AT Mode (Default)

**AMI
BIOS Setup**

3.1 System Test and Initialization

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors.

System configuration verification

These routines check the current system configuration stored in the CMOS memory and BIOS NVRAM. If system configuration is not found or system configuration data error is detected, system will load optimized default and re-boot with this default system configuration automatically.

There are four situations in which you will need to setup system configuration:

1. You are starting your system for the first time
2. You have changed the hardware attached to your system
3. The system configuration is reset by Clear-CMOS jumper
4. The CMOS memory has lost power and the configuration information has been erased.

3.2 AMI BIOS Setup

AMI BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM and BIOS NVRAM so that it retains the Setup information when the power is turned off.

Entering Setup

Power on the computer and press or <F2> immediately. This will allow you to enter Setup.

Main

Set the date, use tab to switch between date elements.

Advanced

Enable disable boot option for legacy network devices

Chipset

Host bridge parameters.

Boot

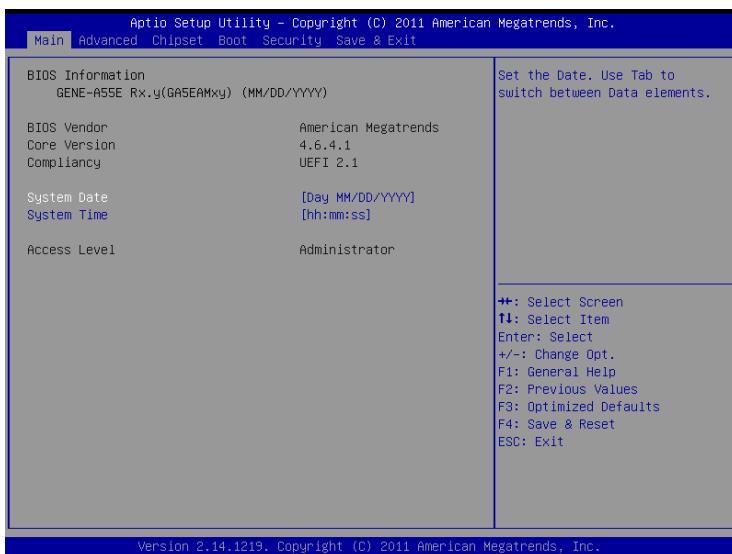

Enables/disable quiet boot option.

Security

Set setup administrator password.

Save&Exit

Exit system setup after saving the changes.

Setup Menu**Setup submenu: Main****Options summary: (*default setting*)**

Driver Installation

The GENE-A55E comes with a DVD-ROM that contains all drivers and utilities that meet your needs.

Follow the sequence below to install the drivers:

- Step 1 – Install Chipset Driver
- Step 2 – Install LAN Driver
- Step 3 – Install Audio Driver
- Step 4 – Install AHCI Driver (Optional)
- Step 5 – Install PCI to ISA Bridge Driver
- Step 6 – Serial Port Driver (Optional)

4.1 Installation:

Insert the GENE-A55E DVD-ROM into the DVD-ROM Drive. And install the drivers from Step 1 to Step 6 in order.

Step 1 – Install Chipset Driver

1. Click on the **STEP1 - CHIPSET** folder and select the OS folder according to your operating system.
2. Double click on the **Setup.exe** file located in the folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 2 – Install LAN Driver

1. Click on the **STEP2 - LAN** folder and select the OS folder according to your operating system.
2. Double click on the **Setup.exe** file located in the folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 3 – Install Audio Driver

1. Click on the **STEP3 - AUDIO** folder and select the OS folder according to your operating system.
2. Double click on the **Setup.exe** file located in the folder
3. Follow the instructions that the window shows
4. The system will help you install the driver automatically

Step 4 – Install AHCI Driver (Optional)

This driver is needed when installing Windows XP with SATA in AHCI mode. Please refer to Appendix D AHCI Settings

Step 5 – Install PCI to ISA Bridge Driver

1. Click on **Start** button.
2. Click on **Settings** button
3. Click on **Control Panel** button
4. Click on **System** button
5. Select **Hardware** and click on **Device Manager...**
6. Double click on **Other PCI Bridge Device**
7. Click on **Update Driver...**
8. Click on **Next**
9. Select **Search for a suitable driver...**, then click on **Next**
10. Select **Specify a location**, then click on **Next**
11. Click on **Browse**
12. Select “**Ite**” file from DVD-ROM (**Driver/ STEP5 - PCI to ISA Bridge**) then click on **open**
13. Click on **OK**
14. Click on **Next**
15. Click on **Yes**
16. Click on **Finish**

Step 6 – Serial Port Driver (Optional)

Please refer to ***readme.txt*** in the ***STEP6- Serial Port Driver (Optional)*** folder.

Appendix

A

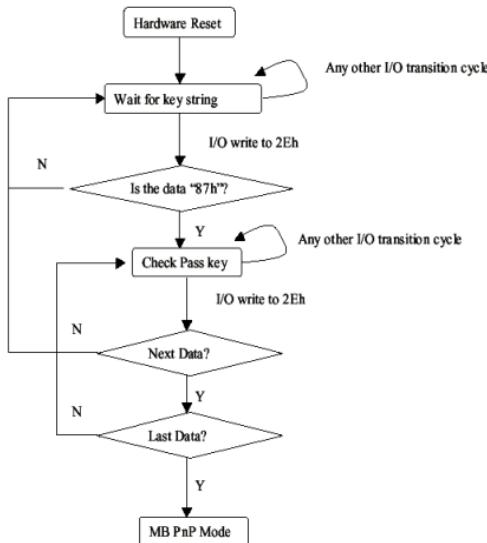

Programming the Watchdog Timer

A.1 Programming

GENE-A55E utilizes FINTEK 81866 chipset as its watchdog timer controller. Below are the procedures to complete its configuration and the AAEON initial watchdog timer program is also attached based on which you can develop customized program to fit your application.

Configuring Sequence Description

After the hardware reset or power-on reset, the FINTEK 81866 enters the normal mode with all logical devices disabled except KBC. The initial state (enable bit) of this logical device (KBC) is determined by the state of pin 121 (DTR1#) at the falling edge of the system reset during power-on reset.

There are three steps to complete the configuration setup: (1) Enter the MB PnP Mode; (2) Modify the data of configuration registers; (3) Exit the MB PnP Mode. Undesired result may occur if the MB PnP Mode is not exited normally.

(1) Enter the MB PnP Mode

To enter the MB PnP Mode, four special I/O write operations are to be performed during Wait for Key state. To ensure the initial state of the key-check logic, it is necessary to perform four write operations to the Special Address port (2EH). Two different enter keys are provided to select configuration ports (2Eh/2Fh) of the next step.

```
-o 4e 87  
-o 4e 87      ( enable configuration )
```

(2) Modify the Data of the Registers

All configuration registers can be accessed after entering the MB PnP Mode. Before accessing a selected register, the content of Index 07h must be changed to the LDN to which the register belongs, except some Global registers.

(3) Exit the MB PnP Mode

Write exit key 0xAA to the index port.

```
-o 4e aa      ( disable configuration )
```

Watch Dog Timer 1, 2, 3 Control Register (Index=F5h,F6h,FAh Default=00h)

7.8.4 Watchdog Control Configuration Register 1 — Index F5h

Bit	Name	R/W	Reset	Default	Description
7	Reserved	R	-	0	Reserved
6	WDTMOUT_STS	R/W	5VSB	0	If watchdog timeout event occurred, this bit will be set to 1. Write a 1 to this bit will clear it to 0.
5	WD_EN	R/W	5VSB	0	If this bit is set to 1, the counting of watchdog time is enabled.
4	WD_PULSE	R/W	5VSB	0	Select output mode (0: level, 1: pulse) of RSTOUT# by setting this bit.
3	WD_UNIT	R/W	5VSB	0	Select time unit (0: 1sec, 1: 60 sec) of watchdog timer by setting this bit.
2	WD_HACTIVE	R/W	5VSB	0	Select output polarity of RSTOUT# (1: high active, 0: low active) by setting this bit.
1-0	WD_PSWIDTH	R/W	5VSB	0	Select output pulse width of RSTOUT# 0: 1 ms 1: 25 ms 2: 125 ms 3: 5 sec

7.8.5 Watchdog Timer Configuration Register 2 — Index F6h

Bit	Name	R/W	Reset	Default	Description
7-0	WD_TIME	R/W	5VSB	0	Time of watchdog timer (0~255)

7.8.6 Watchdog PME Enable Configuration Register 2 — Index FAh

Bit	Name	R/W	Reset	Default	Description
7	WDT_PME	R	5VSB	0	0: No WDT PME occurred. 1: WDT PME occurred. The WDT PME is occurred one unit before WDT timeout.
6	WDT_PME_EN	R/W	5VSB	0	0: Disable Watchdog PME. 1: enable Watchdog PME.
5	Reserved	R	-	0	Reserved
4	WDT_CLK_SEL	R/W	5VSB	1	WDT Clock Source Select 0: Internal 1KHz clock. 1: 1KHZ clock driven by CLKIN.
3-1	Reserved	R	-	0	Reserved
0	WDOUT_EN	R/W	5VSB	0	0: disable Watchdog time out output via WDTRST#. 1: enable Watchdog time out output via WDTRST#.

A.2 F81866 Watchdog Timer Initial Program

Appendix

D

AHCI Settings

D.1 Setting AHCI

OS installation to SETUP AHCI Mode

Step 1: Copy files from “Driver DVD -> Step4 – AHCI(Optional)\WinXP_32” to diskette.

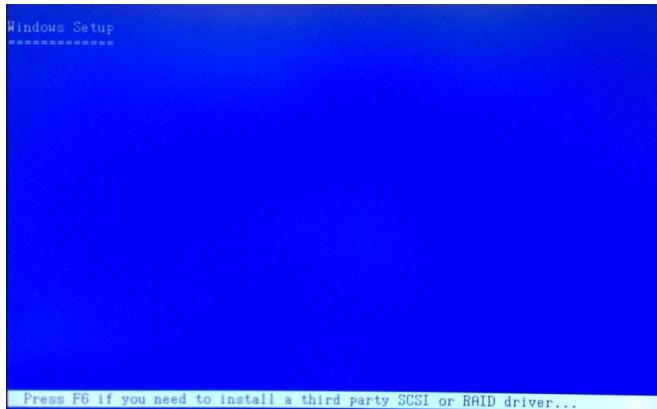

Step 2: Connect the USB Floppy drive to the board and insert the diskette from previous step.

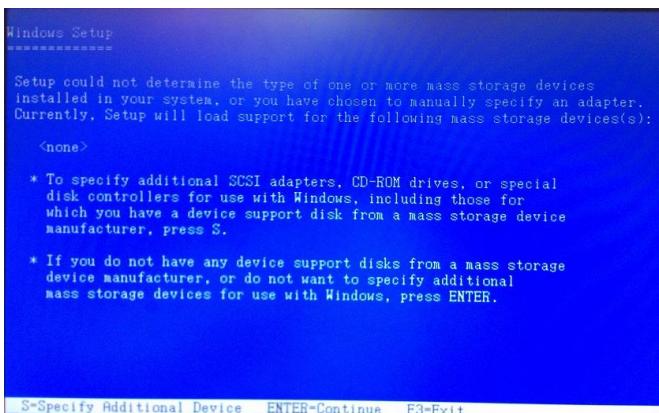

Step 3: Configure SATA Controller to AHCI mode in **BIOS SETUP**

Step 4: Boot to DVD/CD-ROM device to install OS

Step 5: Press “**F6**” to install AHCI driver

Step 6: Press “**S**” to install AHCI driver

Step 7: Choose “**AMD AHCI Compatible RAID Controller-x86 platform**” for Windows XP 32-bit system; “**AMD AHCI Compatible RAID Controller-x64 platform**” for Windows XP 64-bit system.

Step 8: Windows Setup will display the controller name you selected in previous step and continue to install OS when ”**ENTER**” pressed.
