Advantech Co., Ltd. reserves the right to improve the products described in this manual at any time without notice. No part of this manual may be reproduced, copied, translated, or transmitted in any form or by any means without the prior written permission of Advantech Co., Ltd. The information provided in this manual is intended to be accurate and reliable. However, Advantech Co., Ltd. assumes no responsibility for its use, nor for any infringements of the rights of third parties, which may result from its use.

Acknowledgements

AMD is a trademark of Advanced Micro Devices, Inc.

Microsoft Windows and MS-DOS are registered trademarks of Microsoft Corp.

All other product names or trademarks are the property of their respective owners.

Product Warranty (2 years)

Advantech warrants to you, the original purchaser, that each of its products will be free from defects in materials and workmanship for two years from the date of purchase.

This warranty does not apply to any products which have been repaired or altered by persons other than repair personnel authorized by Advantech, or which have been subject to misuse, abuse, accident or improper installation. Advantech assumes no liability under the terms of this warranty as a consequence of such events.

Because of Advantech's high quality-control standards and rigorous testing, most of our customers never need to use our repair service. If an Advantech product is defective, it will be repaired or replaced at no charge during the warranty period. For out-of-warranty repairs, you will be billed according to the cost of replacement materials, service time and freight. Please consult your dealer for more details.

If you think you have a defective product, follow these steps:

1. Collect all the information about the problem encountered. (For example, CPU speed, Advantech products used, other hardware and software used, etc.) Note anything abnormal and list any onscreen messages you get when the problem occurs.
2. Call your dealer and describe the problem. Please have your manual, product, and any helpful information readily available.
3. If your product is diagnosed as defective, obtain an RMA (return merchandise authorization) number from your dealer. This allows us to process your return more quickly.
4. Carefully pack the defective product, a fully-completed Repair and Replacement Order Card and a photocopy proof of purchase date (such as your sales receipt) in a shippable container. A product returned without proof of the purchase date is not eligible for warranty service.
5. Write the RMA number visibly on the outside of the package and ship it prepaid to your dealer.

Declaration of Conformity

CE

This product has passed the CE test for environmental specifications. Test conditions for passing included the equipment being operated within an industrial enclosure. In order to protect the product from being damaged by ESD (Electrostatic Discharge) and EMI leakage, we strongly recommend the use of CE-compliant industrial enclosure products.

FCC Class B

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FM

This equipment has passed the FM certification. According to the National Fire Protection Association, work sites are classified into different classes, divisions and groups, based on hazard considerations. This equipment is compliant with the specifications of Class I, Division 2, Groups A, B, C and D indoor hazards.

Technical Support and Assistance

1. Visit the Advantech website at <http://www.advantech.com> where you can find the latest information about the product.
2. Contact your distributor, sales representative, or Advantech's customer service center for technical support if you need additional assistance. Please have the following information ready before you call:
 - Product name and serial number
 - Description of your peripheral attachments
 - Description of your software (operating system, version, application software, etc.)
 - A complete description of the problem
 - The exact wording of any error messages

Warnings, Cautions and Notes

Warning! Warnings indicate conditions, which if not observed, can cause personal injury!

Caution! Cautions are included to help you avoid damaging hardware or losing data. e.g.

There is a danger of a new battery exploding if it is incorrectly installed. Do not attempt to recharge, force open, or heat the battery. Replace the battery only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.

Note! Notes provide optional additional information.

Document Feedback

To assist us in making improvements to this manual, we would welcome comments and constructive criticism. Please send all such - in writing to:

Chapter 1

General Information

This chapter provides basic information about the SOM-5893 computer-on-module.

- Introduction
- Specifications
- Functional Block Diagram

1.1 Introduction

SOM-5893 is a COM-Express basic pin-out Type 6 module that complies with the PICMG (PCI Industrial Computer Manufacturers Group) COM.0 R2.1 specification. The CPU module comprises a second-generation AMD embedded R-series APU, FCH A77E, and other peripheral chips to provide COM-specific functionalities. The latest AMD APU supports HeteoHSA.

SOM-5893 can support four independent symmetrical displays (LVDS, DDI, and VGA) of up to 4K2K DDI resolution, enabling users to set diverse combinations of simultaneous displays. With a next-generation AMD Radeon HD9000 graphics card, DX11.1 support, OpenCL 1.2, OpenGL 4.2, and a H.264 and MPEG4 decoder, this module offers enhanced media effects and outstanding 3D performance. Built-in high speed I/O ports include USB 3.0 and SATAIII for transmitting big data. The PEG x16 lane with up to Gen3 compliance (8 GT/s bit rate) and 7 PCIe x1 can be configured according to users' applications via the BIOS Setup utility.

Advantech's iManager 2.0 was developed to facilitate many embedded application functions, such as a multi-level watchdog timer, voltage and temperature monitoring, thermal protection and mitigation through processor throttling, LCD backlight on/off and brightness control, and embedded storage for customized information.

SUSIAccess, Advantech's remote management software, allows devices to be monitored and controlled remotely over the Internet for easy maintenance. All Advantech COM-Express modules are integrated with iManager and SUSIAccess to enhance customer applications.

The high performance, embedded platform-level power consumption, and diverse extensions and I/O interfaces of SOM-5893 make it suitable for computing-intensive, thermally sensitive, graphics/media-intensive designs, and I/O-demanding applications.

1.2 Specifications

1.2.1 Board Information

- **Pin Definition:** PICMG COM.0 R2.1 Type 6 pin-out definition
- **Form Factor:** PICMG COM.0 R2.1 basic module 125 x 95 mm

1.2.2 System Information

- **CPU:** Second-generation AMD embedded R-series APU

CPU	Standard Freq. (GHz)	Max.Turbo Freq. (GHz)	Core	Cache (MB)	TDP (W)
RX-427BB	2.7	3.6	4	4	35
RX-425BB	2.5	3.4	4	4	35
RX-225FB	2.2	3.0	2	1	17

- **Chipset:** AMD A77E FCH
- **Memory:** 2 SODIMM socket for DDR3L-1600, up to 16GB
- **BIOS:** AMI UEFI 64Mbit SPI BIOS
- **Power management:** Supports power saving modes including Normal/Standby/Suspend modes. ACPI 2.0 compliant.

1.2.3 Display

- **Graphics Core:** AMD Radeon HD9000 GPU supports DX11.1, OpenCL 1.2, OpenGL 4.2, and H.264 and MPEG4 decoding.

CPU	Graphics Core	Base Freq.	Boost Freq.
RX-427BB	8	600MHz	686MHz
RX-425BB	6	576MHz	654MHz
RX-225FB	3	494MHz	533MHz

- **VGA:** Up to 1920 x 2000 resolution
- **LVDS:** Supports single and dual-channel 18/24-bit LVDS, up to 1920 x 1200
- **DDIs (HDMI/DVI/DP):** Supports 3 ports HDMI, DVI, or DP multiplexed.
- **Resolution:**
 - HDMI 1.4. supports up to 4096 x 2160 @ 30Hz, or 1920 x 1200 @ 60Hz
 - DisplayPort 1.2. supports up to 4096 x 2160 @ 30Hz
 - DVI Single-Link 1920 x 1200 @ 60Hz
- **Display Boot Up Order:**
 - First: LVDS (always first priority by default)
 - Second: DDIs
 - Third: VGA
- **Dual Displays: (in DOS/BIOS mode)**
 - LVDS + any DDI
 - LVDS + VGA
 - Any DDI + VGA (after LVDS function is disabled)
- **Triple Displays: (after booting to OS)**
 - LVDS + any 1 DDI + VGA
 - LVDS + any 2 DDIs
 - Any 2 DDIs + VGA (after LVDS function is disabled)
 - Any 3 DDIs (after LVDS function is disabled)
- **Quad Displays: (after booting to OS)**
 - LVDS + any 2 DDIs + VGA
 - LVDS + any 3 DDIs
 - Any 3 DDIs + VGA (after LVDS function is disabled)

1.2.4 Expansion Interface

- **PCI Express x16:** Supports one PCIe x16 port (default) compliant to PCIe Gen3* (8.0 GT/s) specifications. Other combinations can be configured using the BIOS Setup utility. Please contact Advantech's sales team for more information.

	x16	x8	x4	DDI
Default	1	0	0	0
Option 1	0	2	0	0
Option 2	0	1	1	1

Note! PCIe x16 can be reconfigured to 1 DDI + PCIe x8 + PCIe x4 without hardware modifications.

- **PCI Express x1:** Supports seven PCIe x1 ports (default) compliant to PCIe Gen2* (5.0 GT/s) specifications. Other combinations can be configured using the BIOS Setup utility. Please contact Advantech's sales team for more details.

	x4	x2	x1
Default	0	0	7
Option 1	0	2	3
Option 2	1	0	3

- **Audio Interface:** HD audio interface
- **LPC Bus**
- **SMBus**
- **I2C Bus:** Up to 400KHz
- **SPI:** Supports SPI BIOS only

1.2.5 I/O

- **Ethernet:** Intel i211AT Gigabit LAN supports speeds of 10/100/1000 Mbps
- **SATA:** Four SATA Gen3 (600 Gb/s) ports
- **USB Interface:** Four USB3.0 and eight USB 2.0 ports
- **Serial Port:** Two 2-wire serial ports
- **Express Card:** Two ports
- **Panel Control:** Supports panel backlight on/off and brightness control
- **Thermal Protection:** Supports thermal shutdown and APU throttling
- **Watchdog Timer:** Multi-level, multi-option watchdog timer with 65536-level timer interval (0 ~ 65535 seconds)
- **Smart Fan:** One port on module, one port on carrier board
- **GPIO:** 8-bit GPIO
- **Hardware Monitor:** Vin, 5VSB, CMOS
- **TPM:** BOM option, default not available

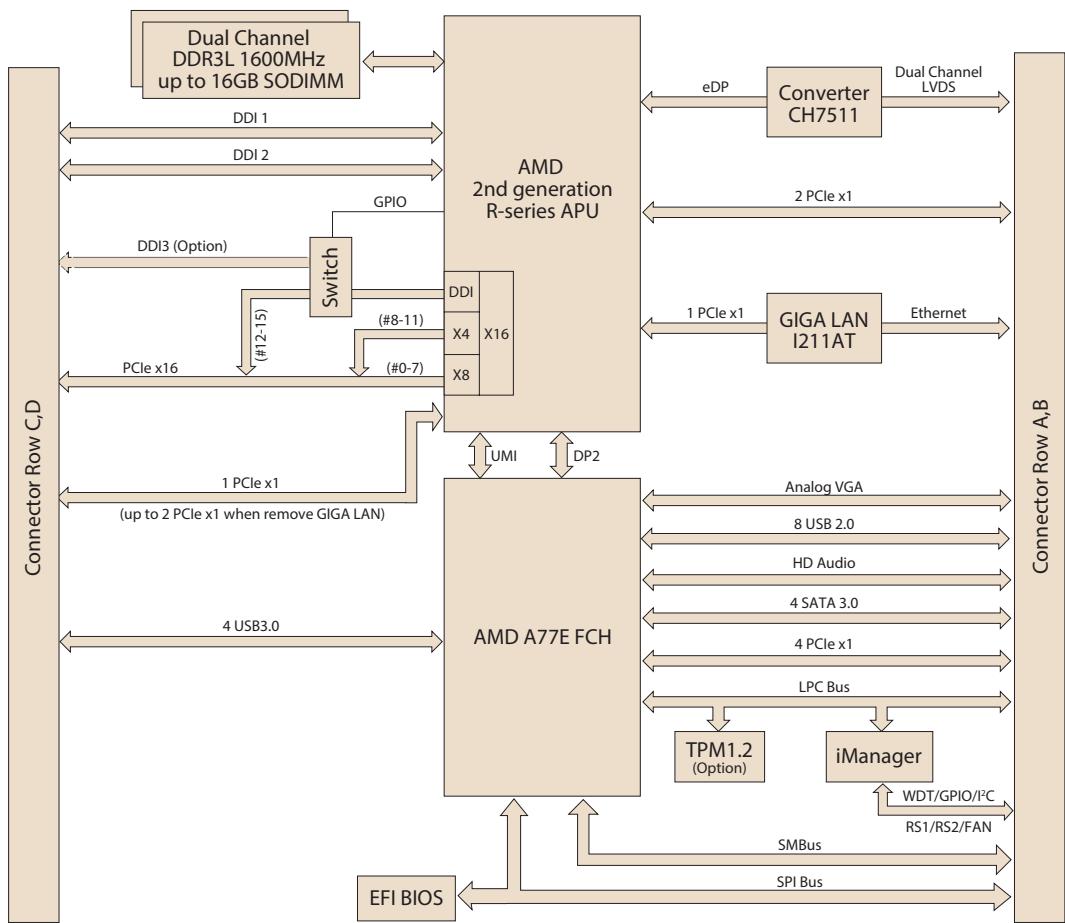

1.2.6 iManager 2.0

Refer to Section 4.3.

1.2.7 Mechanical and Environmental Specifications

- **Dimensions:** 125 x 95 mm (4.92 x 3.74")
- **Power Type and Supply Voltage:**
 - ATX: +8.5~20 V and +4.75~5.25VSB (standby power)
 - AT: +8.5~20 V
 - CMOS Battery: +3.3 V
- **Power Requirement:**
 - Test Condition: SOM-5893RG-U7A1E (RX-427BB), DDR3L-1600 16GB, WIN7 64-bit, under 12V and 5VSB input power supply.
 - Idle: 16.6W
 - Max: 35.8W (Burn-in V7.0 Pro)
- **Temperature Specifications:**
 - Operating: 0 ~ 60 °C (32 ~ 140 °F)
 - Storage: -40 ~ 85 °C (-40 ~ 185 °F)
- **Humidity Specifications:**
 - Operating: 40 °C @ 95% relative humidity, non-condensing
 - Storage: 60 °C @ 95%relative humidity, non-condensing

1.3 Functional Block Diagram

Chapter 2

Mechanical Information

This chapter gives mechanical information on the SOM-5893 CPU computer-on-module.

- Board Information**
- Mechanical Drawing**
- Assembly Drawing**

2.1 Board Information

The figures below indicate the main chips on SOM-5893 Computer-on-Module. Please aware of these positions while designing your own carrier board to avoid mechanical and thermal problems; keep in mind best heat dispassion performance.

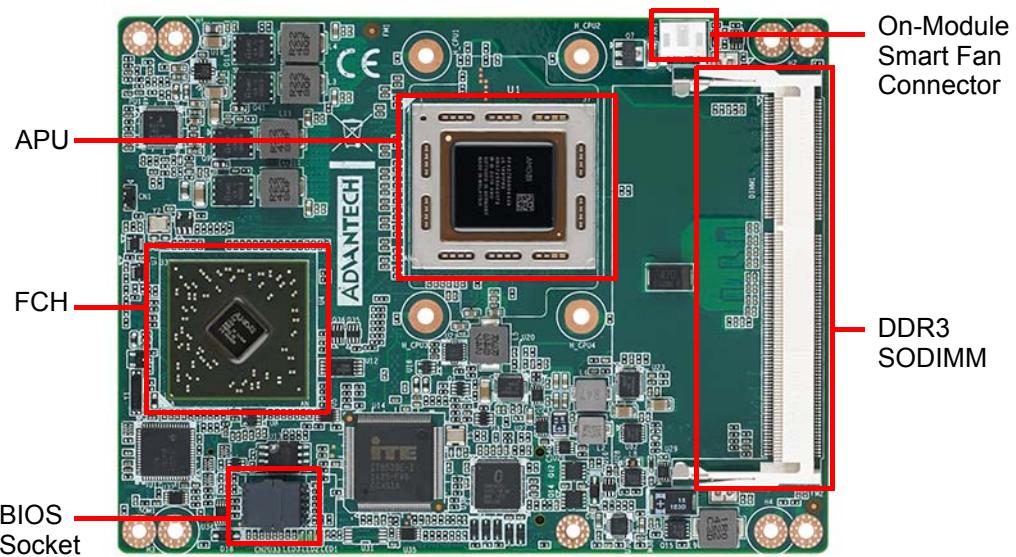

Figure 2.1 Board Chip Identification - Front

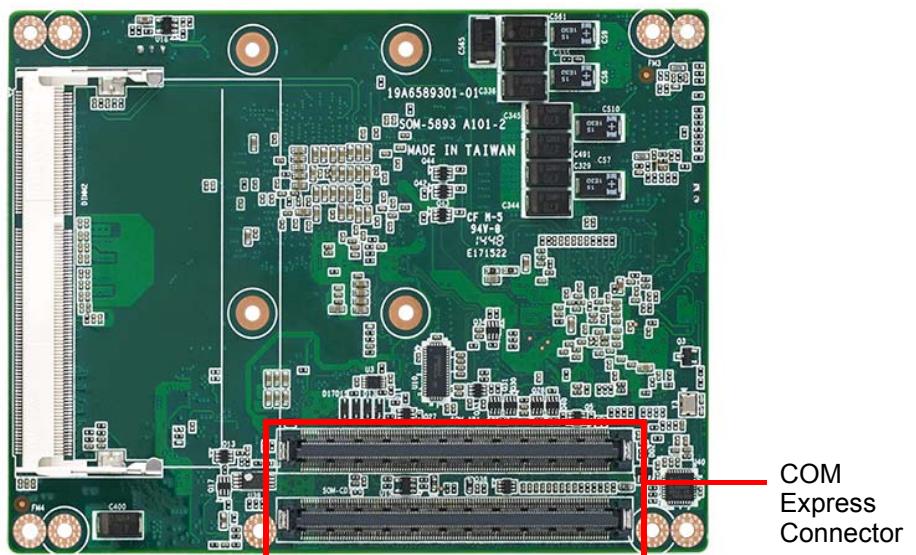

Figure 2.2 Board Chip Identification - Back

2.2 Mechanical Drawing

For more detail about 2D/3D models, please visit [silabs.com](http://www.silabs.com)

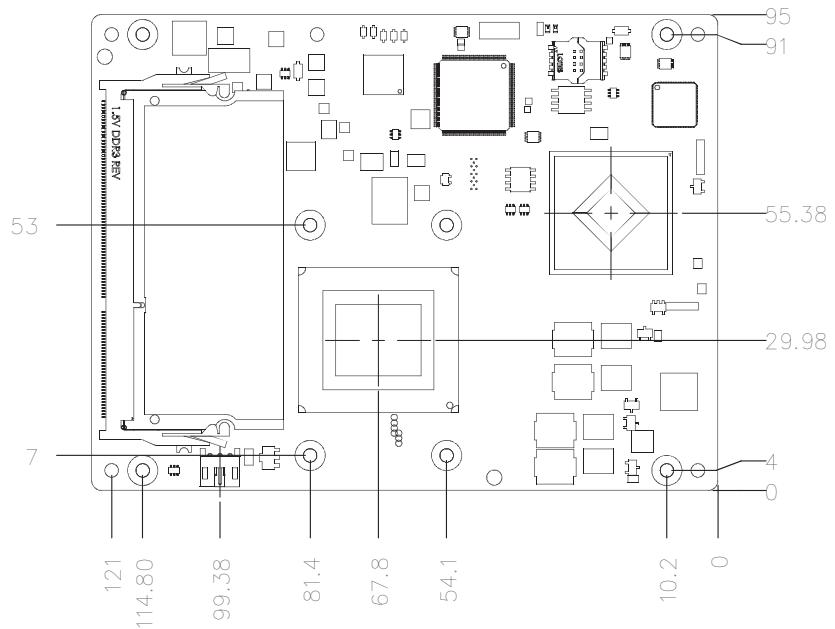

Figure 2.3 Board Mechanical Drawing - Front

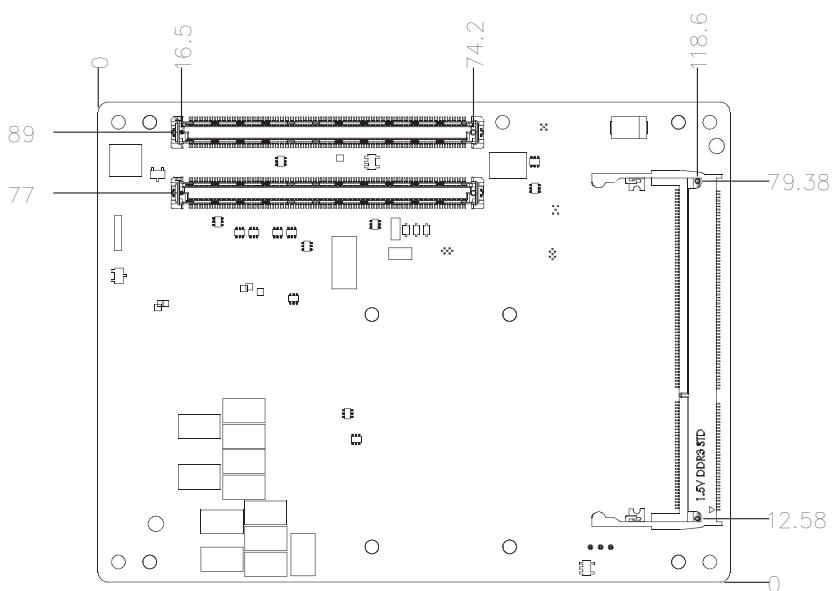

Figure 2.4 Board Mechanical Drawing - Back

2.3 Assembly Drawing

These figures demonstrate the assembly order, from the thermal module, to the COM module, to the carrier board.

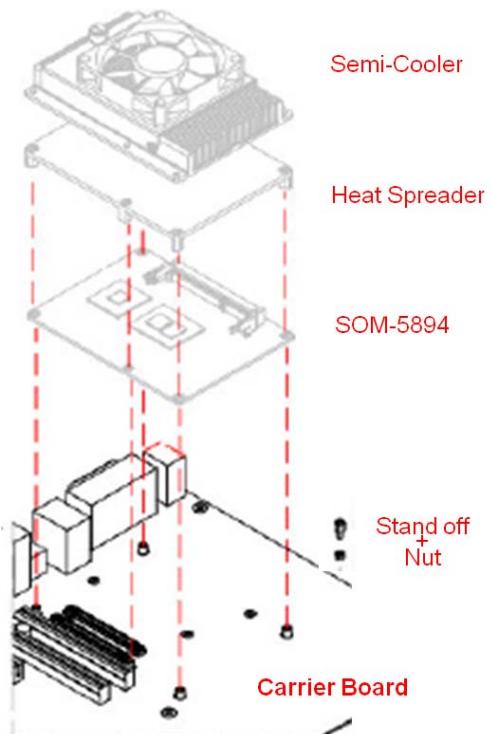

Figure 2.5 Assembly Drawing

There are 4 reserved screw holes for SOM-5893 to be pre-assembled with the heat spreader.

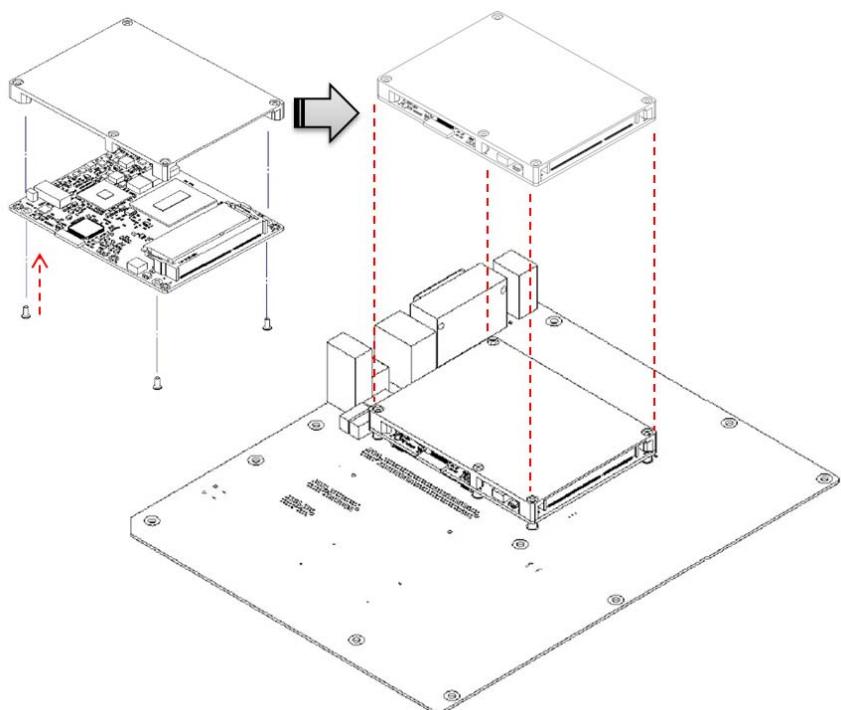

Figure 2.6 Heatspreader Pre-assembly

Chapter 3

AMI BIOS

This chapter gives BIOS setup information for the SOM-5893 CPU computer-on-module.

- Introduction
- Entering Setup
- Hot / Operation Key
- Exit BIOS Setup Utility

3.1 Introduction

SOM-5893 BIOS has been stored in a flash ROM which is inserted into a BIOS socket on the board. With the BIOS Setup program, users can modify BIOS settings and control various system features. This chapter describes the basic navigation of the SOM-5893 BIOS setup screens.

Advantech will supply BIOS revisions for product optimization, and users can re-flash the latest BIOS through the AFU utility. Please contact Advantech support for details.

Figure 3.1 BIOS Setup Utility Main Screen

SOM-5893 BIOS has a built-in Setup program that allows users to modify the basic system configuration. This information is stored in flash ROM so it retains the Setup information when the power is turned off.

3.2 Entering Setup

Turn on the computer and then press <F2> or to enter Setup menu.

3.2.1 Main Setup

When users first enter the BIOS Setup they enter the Main setup screen. Users can always return to the Main setup screen by selecting the Main tab. There are two Main Setup options. They are described in this section. The Main BIOS Setup screen is shown below.

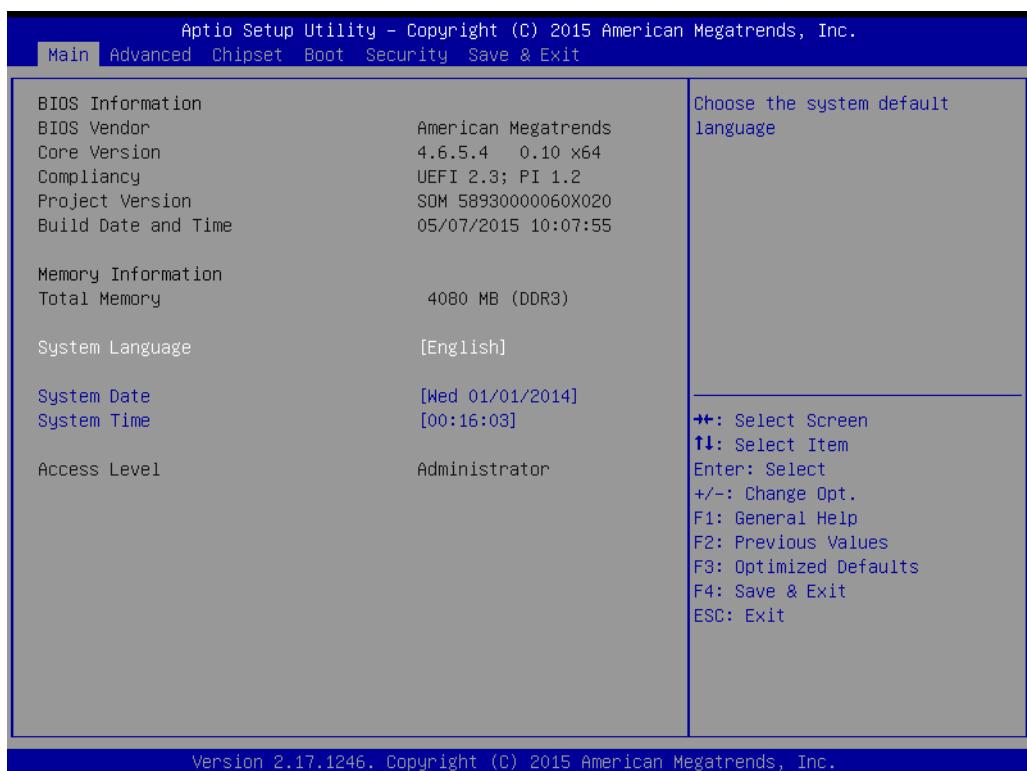

Figure 3.2 Main Setup Screen

The Main BIOS setup screen has two main frames. The left frame displays all the options that can be configured. Grayed-out options cannot be configured; options in blue can. The right frame displays the key legend.

Above the key legend is an area reserved for a text message. When an option is selected in the left frame, it is highlighted in white. Often an explanatory text message will accompany it.

■ System Date / System Time

Use these options to change the system time and date. Highlight System Time or System Date using the <Arrow> keys. Enter new values through the keyboard. Press the <Tab> key or the <Arrow> keys to move between fields. The date must be entered in MM/DD/YY format. The time must be entered in HH:MM:SS format.

System Date: mm/dd/yyyy

System Time: hh/mm/ss

3.2.2 Advanced BIOS Features Setup

Select the Advanced tab from the SOM-5893 setup screen to enter the Advanced BIOS Setup screen. Users can select any item in the left frame of the screen, such as CPU Configuration, to go to the sub menu for that item. Users can display an Advanced BIOS Setup option by highlighting it using the <Arrow> keys. All Advanced BIOS Setup options are described in this section. The Advanced BIOS Setup screens are shown below. The sub menus are described on the following pages.

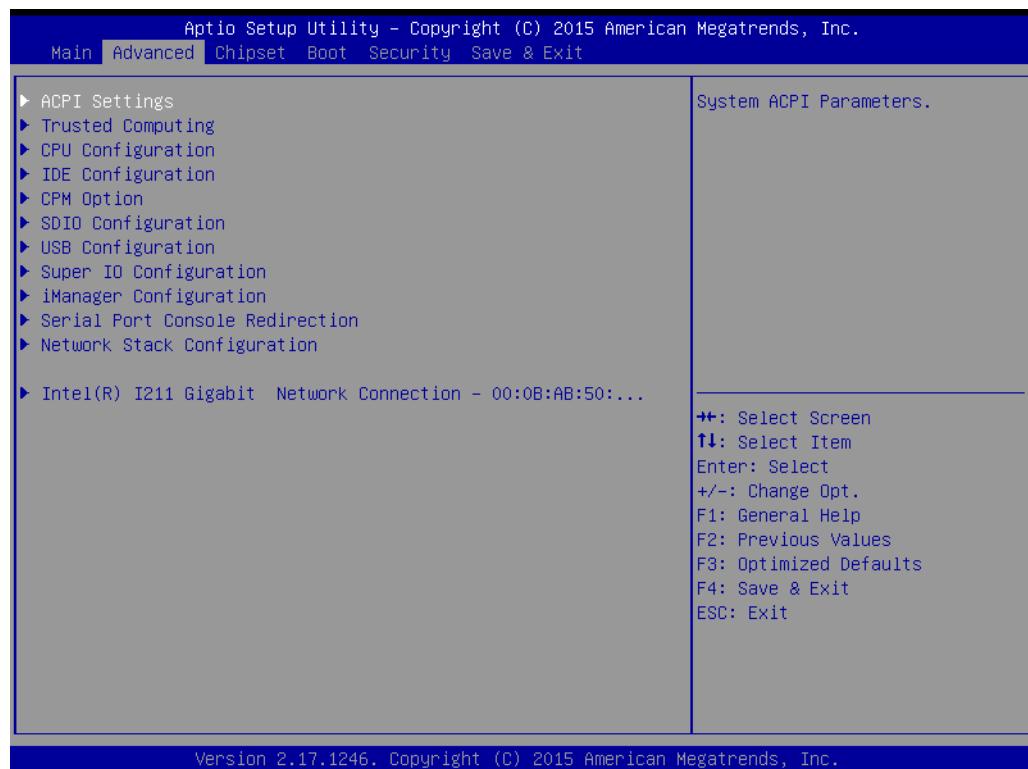

Figure 3.3 Advanced BIOS Features Setup Screen

3.2.2.1 ACPI Settings

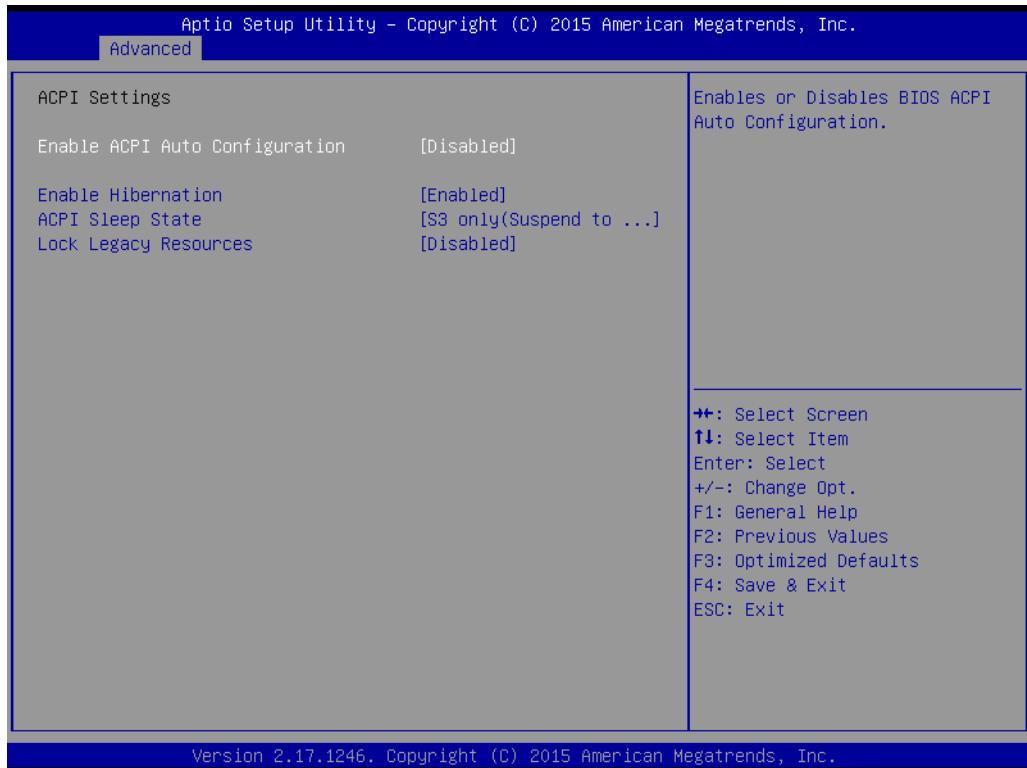

Figure 3.4 ACPI Settings

■ **Enable ACPI Auto Configuration**

This item allows users to enable or disable BIOS ACPI auto configuration.

■ **Enable Hibernation**

This item allows users to enable or disable System ability to hibernate (OS/S4 sleep State). This option may be not effective with some OS..

■ **ACPI Sleep State**

This item allows users to select the ACPI sleep state. The system will enter when the SUSPEND button is pressed.

■ **Lock Legacy Resources**

This item allows users to enable or disable Lock of Legacy Resources.

3.2.2.2 Trusted Computing

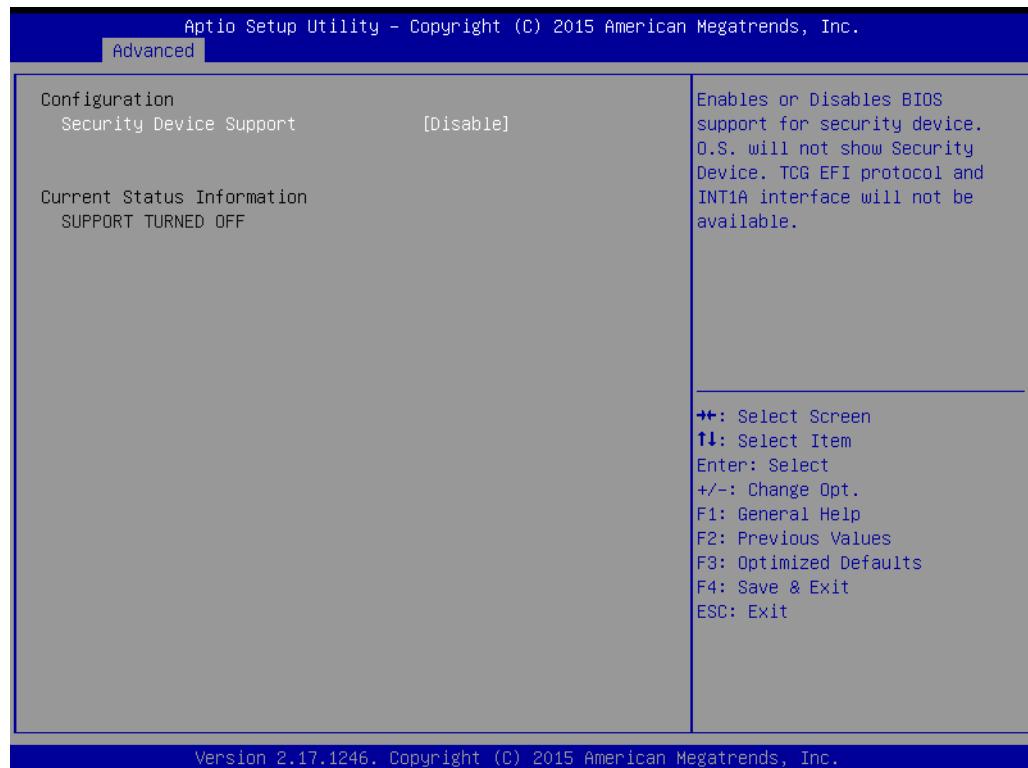

Figure 3.5 Trusted Computing

■ TPM Support

Disable/Enable TPM, if available.

3.2.2.3 CPU Configuration

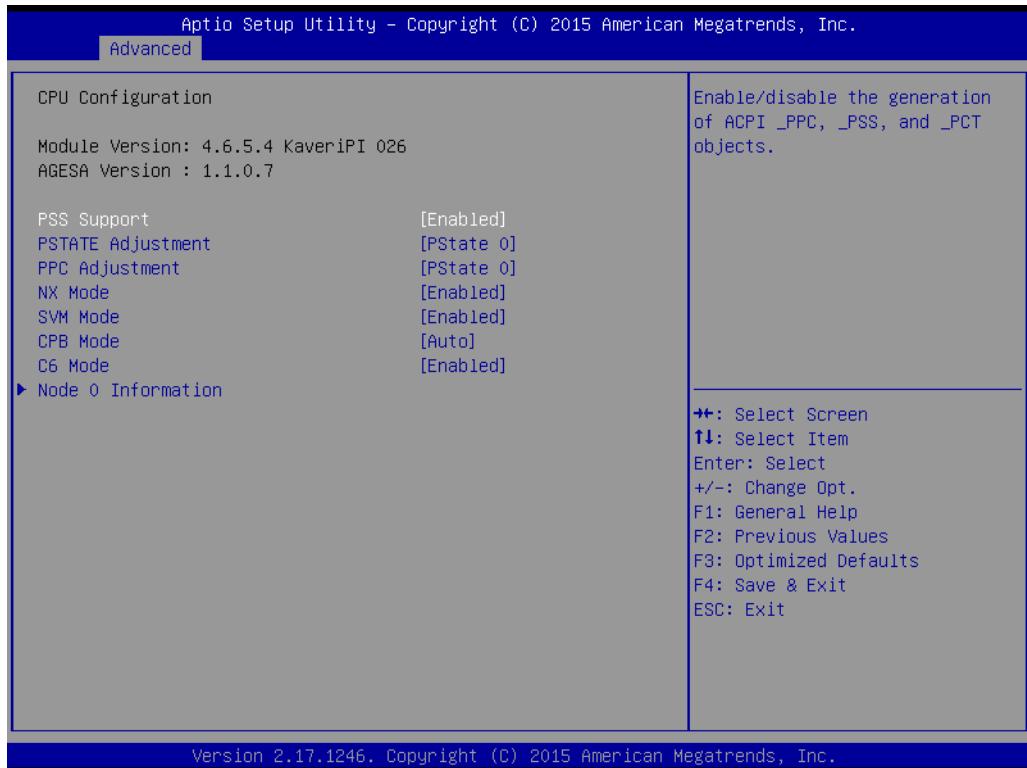

Figure 3.6 CPU Configuration

■ **PSS Support**

This item allows users to enable or disable the generation of ACPI_PPC, _PSS, and _PCT objects.

■ **PSTATE Adjust**

This item allows users to adjust startup P-State level.

■ **PPC Adjustment**

This item is provided to adjust _PPC object.

■ **NX Mode**

This item allows users to enable or disable No-execute page protection function.

■ **SVM Mode**

This item allows users to enable or disable CPU Virtualization.

■ **CPB Mode**

This item allows users to auto or disable CPB Mode.

■ **C6 Mode**

This item allows users to enable or disable C6 Mode.

■ **Node 0 Information**

View Memory information related to Node 0.

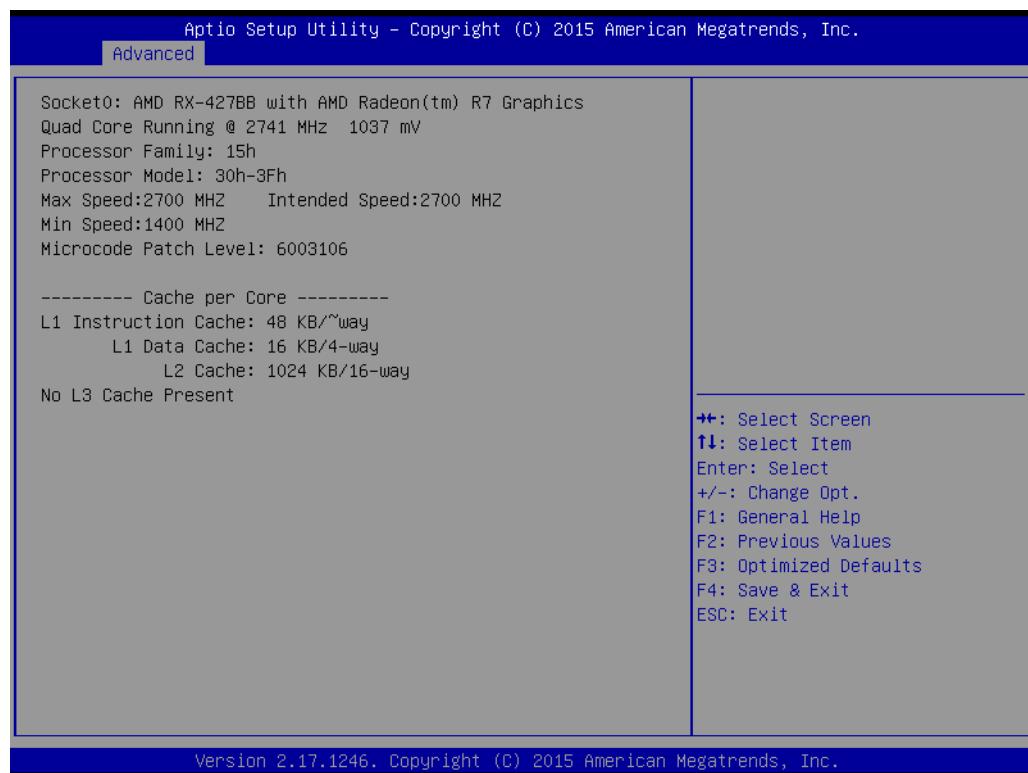

Figure 3.7 Node 0 Information

3.2.2.4 IDE Configuration (SATA port)

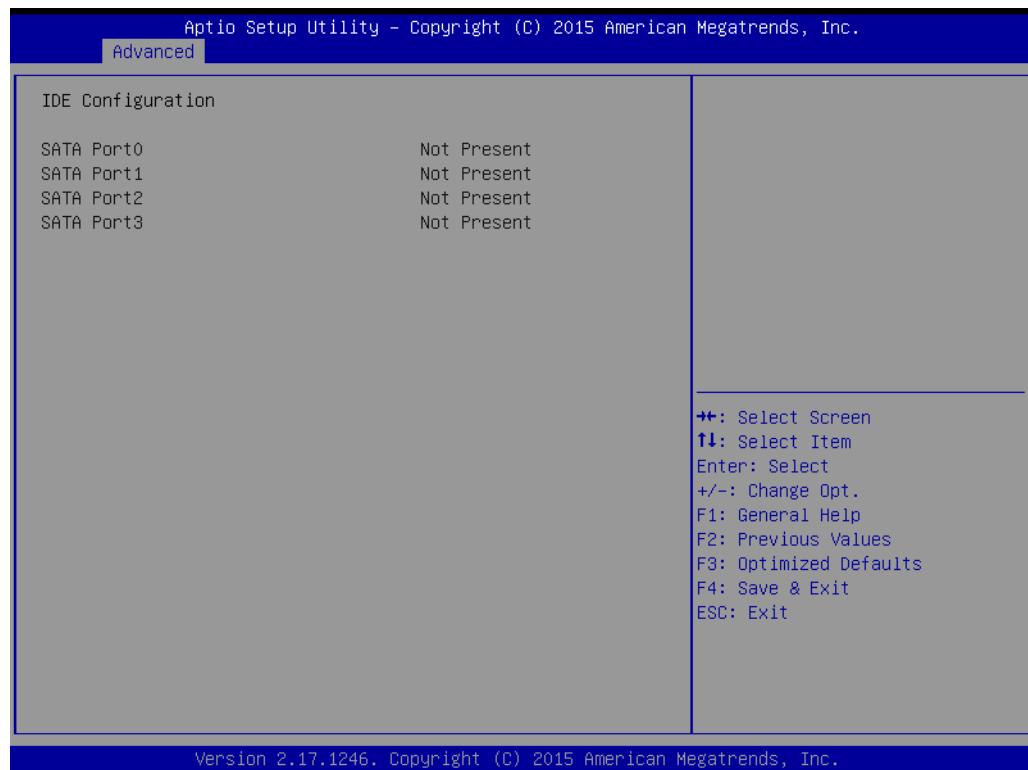

Figure 3.8 IDE Configuration

3.2.2.5 CPM Option

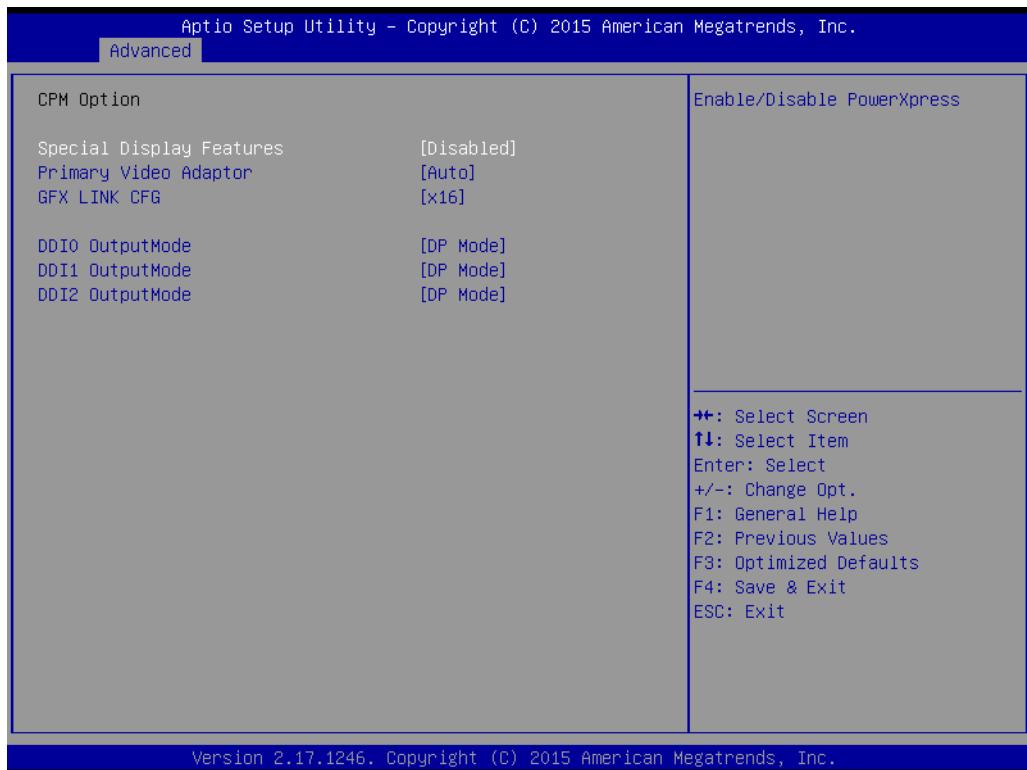

Figure 3.9 CPM Option

■ Special Display Features

This item allows users to enable or disable PowerXpress.

■ Primary Video Adaptor

This item allows users to select Internla or External Graphics.

■ GFX LINK CFG

This item allows users to select GFX Link CFG.

■ DDI0 OutputMode

This item allows users to select to DP mode or HDMI mode.

■ DDI1 OutputMode

This item allows users to select to DP mode or HDMI mode.

■ DDI2 OutputMode

This item allows users to select to DP mode or HDMI mode.

3.2.2.6 SDIO Configuration

Figure 3.10 SDIO configuration

■ SDIO Access Mode

This item allows users to select SDIO Access Mode.

Auto Option: Access SD device in DMA mode if controller support it, otherwise in PIO mode.

DMA Option: Access SD device in DMA mode.

PIO Option: Access SD device in PIO mode.

3.2.2.7 USB Configuration

Figure 3.11 USB Configuration

■ Legacy USB Support

This item allows users to enable or disable Legacy USB Support.

Auto option disables legacy support if no USB devices are connected.

Disable option will keep USB devices available only for EFI applications.

■ XHCI Hand-off

This item allows users to enable or disable XHCI Hand-off.

The XHCI ownership change should be claimed by XHCI driver.

■ EHCI Hand-off

This item allows users to enable or disable EHCI Hand-off.

The EHCI ownership change should be claimed by EHCI driver.

■ USB Mass Storage Driver Support

This item allows users to enable or disable USB Mass Storage Driver Support.

■ USB transfer time-out

This item allows user to select time-out section.

The time-out value for control, bulk, and interrupt transfers.

■ Device reset time-out

This item allows user to select device time-out section.

USB mass storage devices start unit command time-out.

■ Device power-up delay

This item allows user to select device power-up section.

Maximum time the device will take before it properly reports itself to the Host controller. "Auto" uses default value: for a Root port it is 100ms, for a Hub port the delay is taken from Hub descriptor.

3.2.2.8 Super IO Configuration

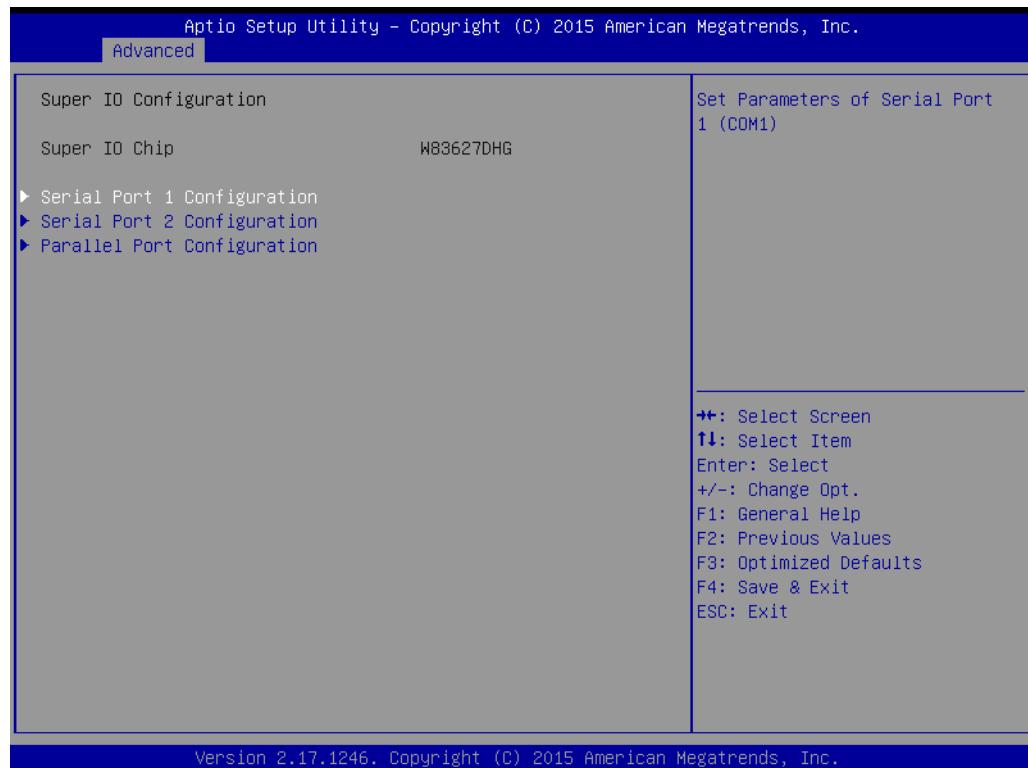

Figure 3.12 Super IO Configuration

■ COM Port 1 Configuration

This item allows user to set Parameters of COM Port 1.

■ COM Port 2 Configuration

This item allows user to set Parameters of COM Port 2.

■ Parallel Port Configuration

This item allows user to set Parameters of Parallel Port (LPT/LPTE).

■ COM Port 1 Configuration

Figure 3.13 COM Port 1 Configuration

– COM Port

COM Port 1 enable or disable.

– Change settings

COM port 1 IRQ/IO/mode resources configuration.

Users can select an optional setting for Super IO device.

■ COM Port 2 Configuration

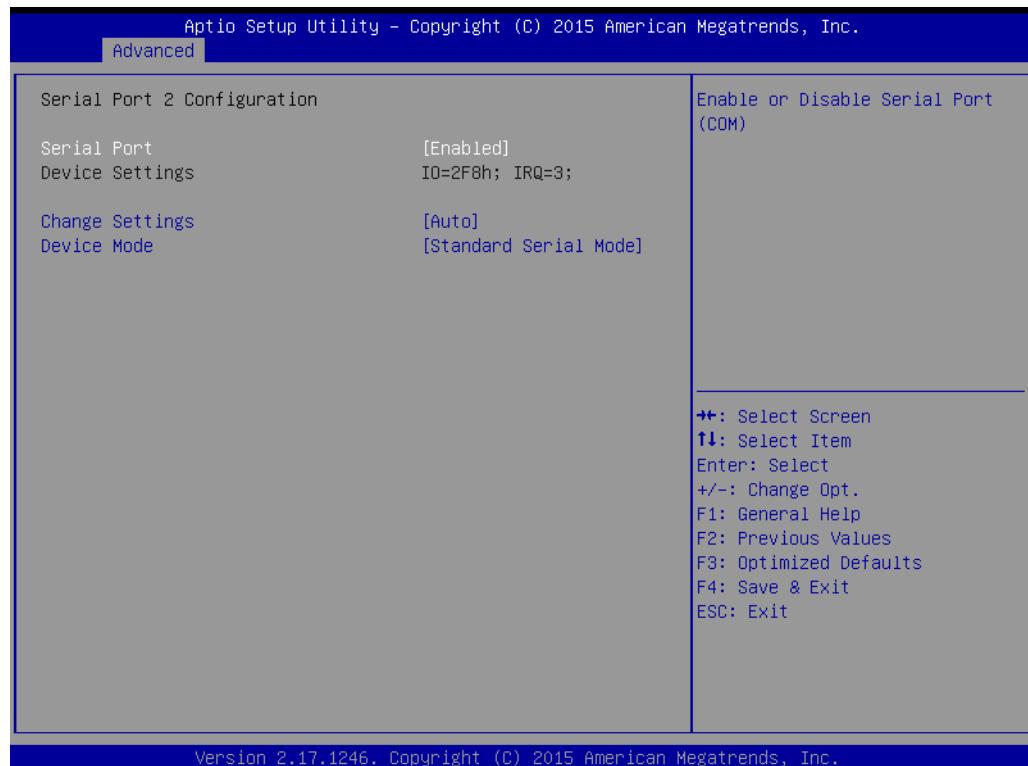

Figure 3.14 COM Port 2 Configuration

- **COM Port**

COM Port 2 enable or disable.

- **Change settings**

COM port 2 IRQ/IO mode resources configuration.

Users can select an optional setting for Super IO device.

■ Parallel Port Configuration

Figure 3.15 Parallel Port Configuration

– Parallel Port

This item allows users to enable or disable Parallel Port (LPT/LPTE).

– Change settings

This item allows users to select an optimal setting for Super IO device.

– Device Mode

This item allows users to change the Printer Port mode.

3.2.2.9 iManager Configuration

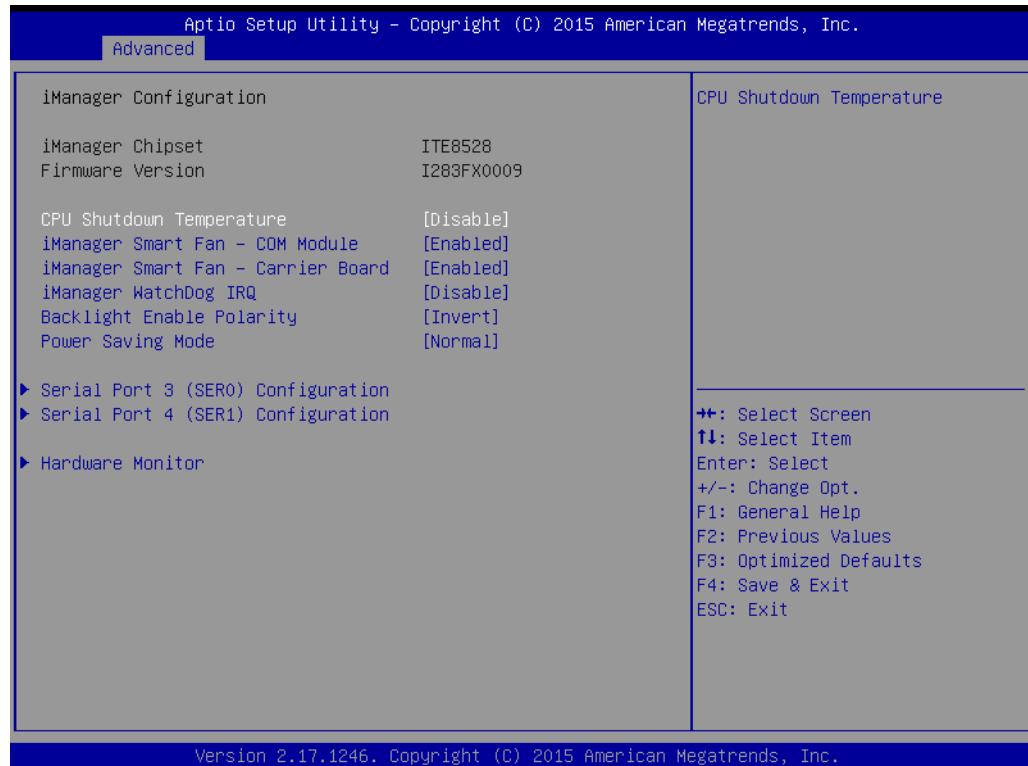

Figure 3.16 iManager Configuration

■ CPU Shutdown Temperature

This item allows users to select CPU Shutdown Temperature.

■ iManager Smart Fan - COM Module

This item allows users to control iManager Smart FAN function in COM Module.

■ iManager Smart Fan - Carrier Board

This item allows users to control iManager Smart function in Carrier Board.

■ iManager WatchDog IRQ

This item allows users to select iManager IRQ number eBrain WatchDog.

■ Backlight Enable Polarity

This item allows users to switch Backlight Enable Polarity for Native or Invert.

■ COM Port 3 (SER0) Configuration

Set parameter of series port 3 (COM3) refer to PICMG SER0_TX / SER0_RX.

■ COM Port 4 (SER1) Configuration

Set parameter of series port 4 (COM4) refer to PICMG SER1_TX / SER1_RX.

■ Hardware Monitor

This item allows users to monitor hardware status.

■ COM Port 3 Configuration

Figure 3.17 COM 3 Configuration

- **COM Port**
COM Port 3 enable or disable.
- **Change settings**
COM port 3 IRQ/IO/mode resources configuration.
Users can select an optional setting for Super IO device.
- **Device Mode**
Select the COM port mode.

■ COM Port 4 Configuration

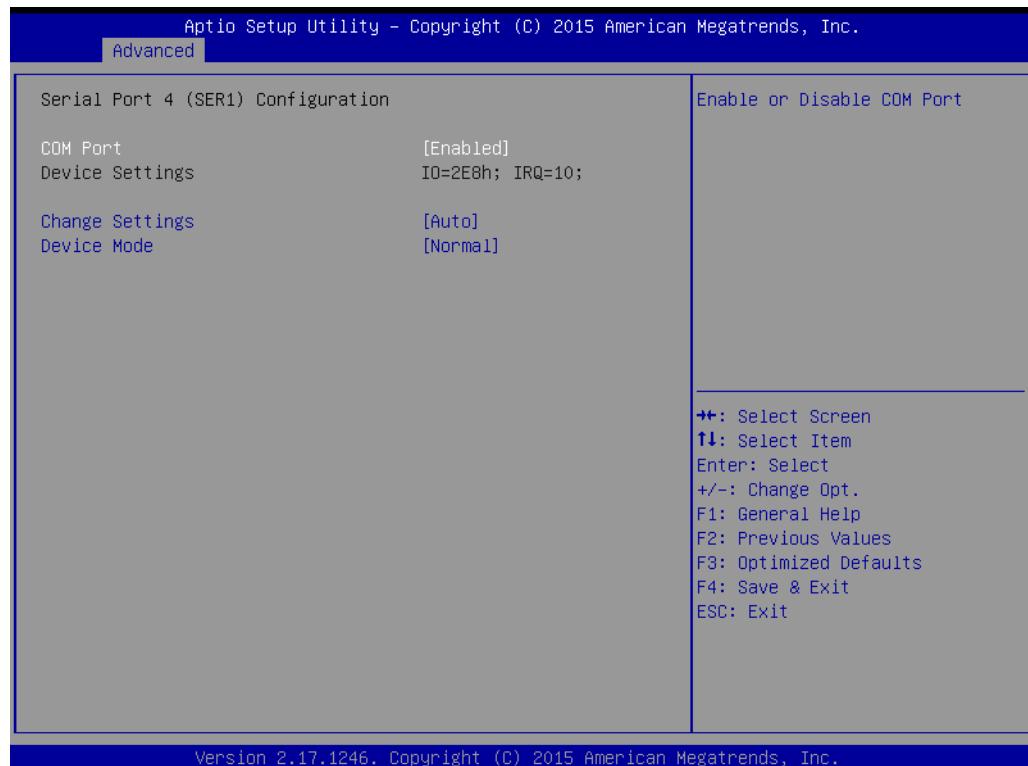

Figure 3.18 COM Port 4 Configuration

- **COM Port 4**
COM Port 4 enable or disable.
- **Change settings**
COM port 4 IRQ/IO/mode resources configuration.
Users can select an optional setting for Super IO device.
- **Device Mode**
Select the COM port mode.

iManager - Hardware Monitor

This item monitor hardware status.

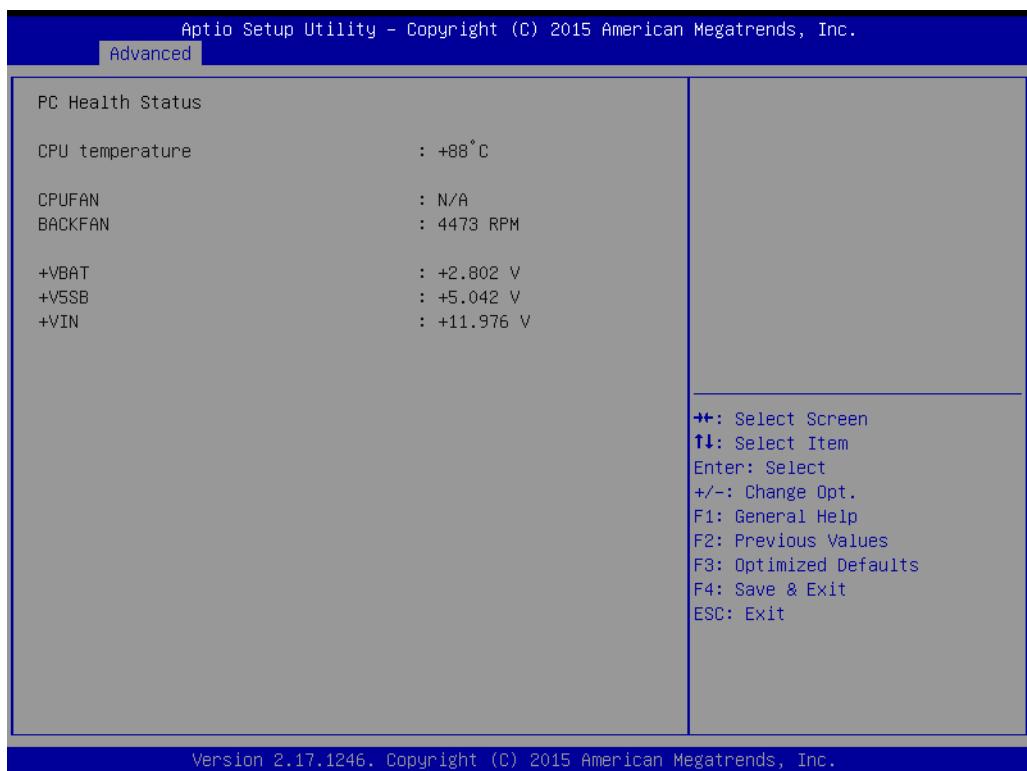

Figure 3.19 iManager - Hardware Monitor

3.2.2.10 Serial Port Console Redirection

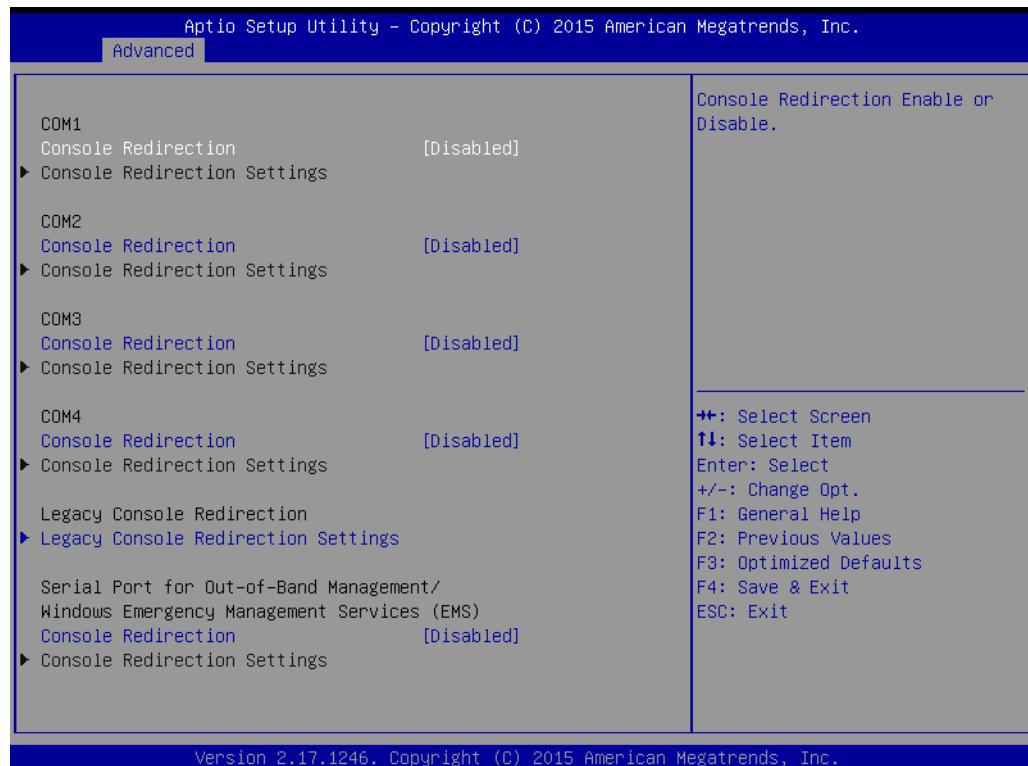

Figure 3.20 Serial Port Console Redirection

■ Console Redirection

This item allows users to enable or disable console redirection for Microsoft Windows Emergency Management Services (EMS).

3.2.2.11 Network Stack

Figure 3.21 Network Stack

■ Network Stack

This item allows users to enable or disable UEFI Network Stack.

3.2.2.12 Intel i211 Gigabit Network Connection

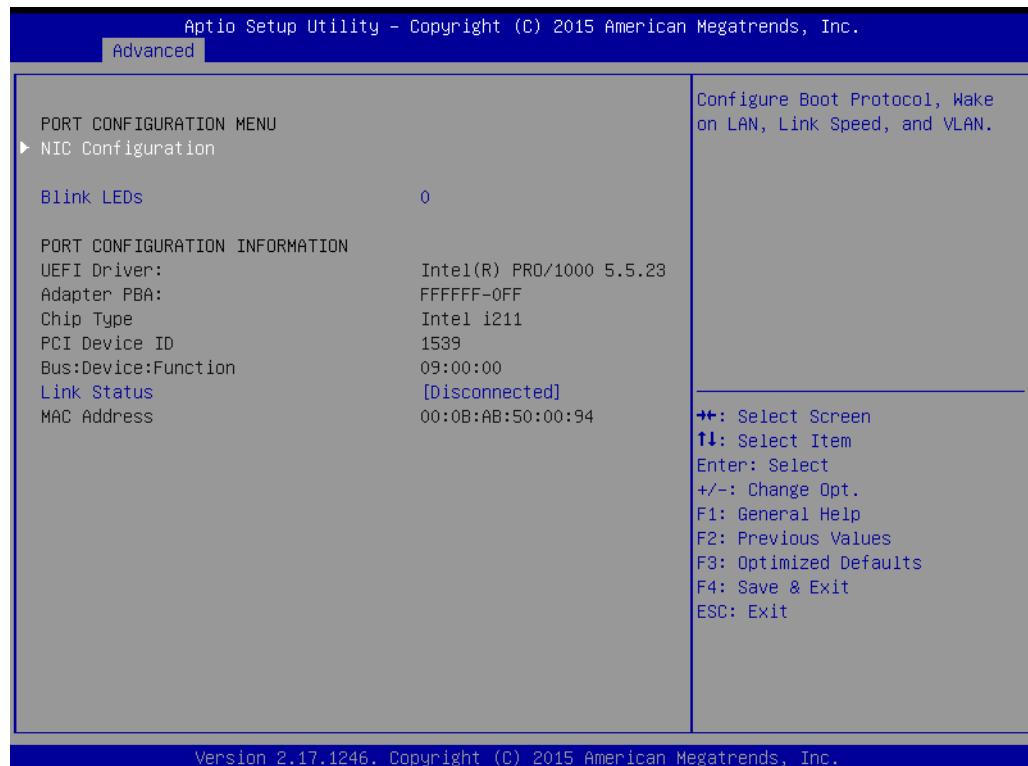

Figure 3.22 Intel i211 Gigabit Network Connection

■ **NIC Configuration**

Configure boot protocol, Wake on LAN, Link Speed, and VLAN.

■ **Blink LEDs**

Identify the physical network port by blinking the associated LED.

■ NIC (Network Interface Card) Configuration

Figure 3.23 NIC Configuration

■ Link Speed

Specifies the port speed used for the selected boot protocol.

■ Wake on LAN

This item allows users to enable or disable the server to be powered on using an in-band magic packet.

3.2.3 Chipset

Select the Chipset tab from the SOM-5893 setup screen to enter the Chipset BIOS Setup screen. You can display a Chipset BIOS Setup option by highlighting it using the <Arrow> keys. All Plug and Play BIOS Setup options are described in this section. The Plug and Play BIOS Setup screen is shown below.

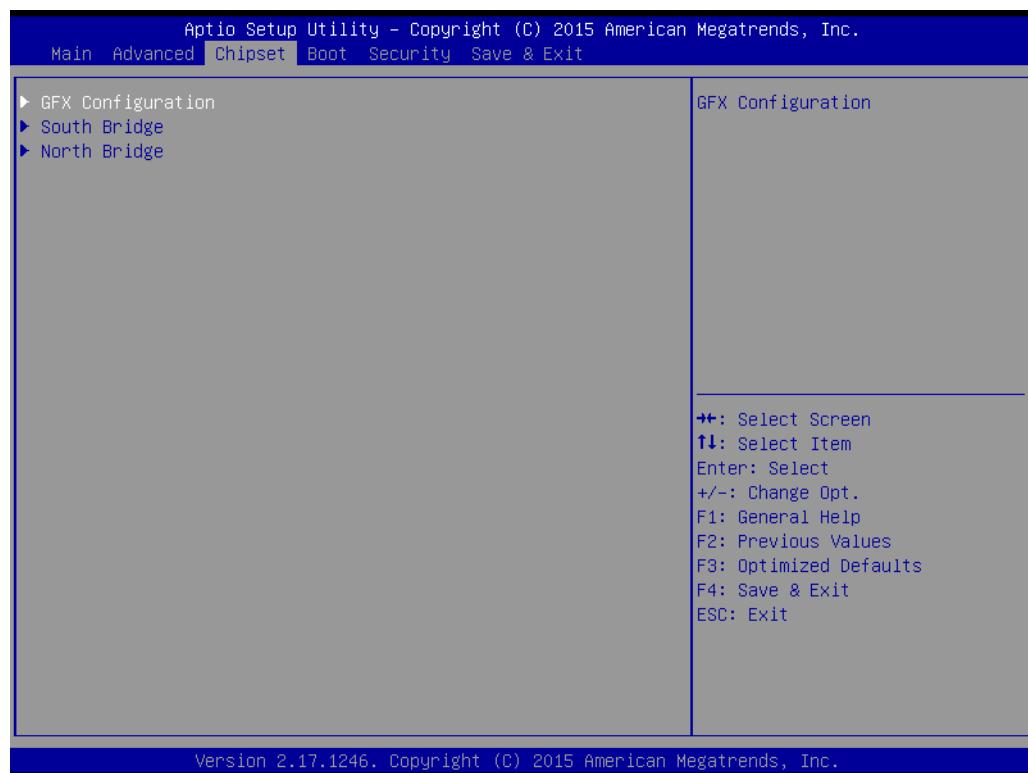

Figure 3.24 Chipset Setup

3.2.3.1 GFX Configuration

Figure 3.25 PCH-IO Configuration

■ **IOMMU**

This item allows users to enable or disable IOMMU support.

■ **Integrated Graphics**

This item allows users to enable or disable integrate graphics controller.

■ **PSPP policy**

This item allows users to select PCIe Speed power policy.

■ **LCD Panel Type**

This item allows users to select LCD panel used by internal graphics device by selecting the appropriate setup item.

3.2.3.2 South Bridge

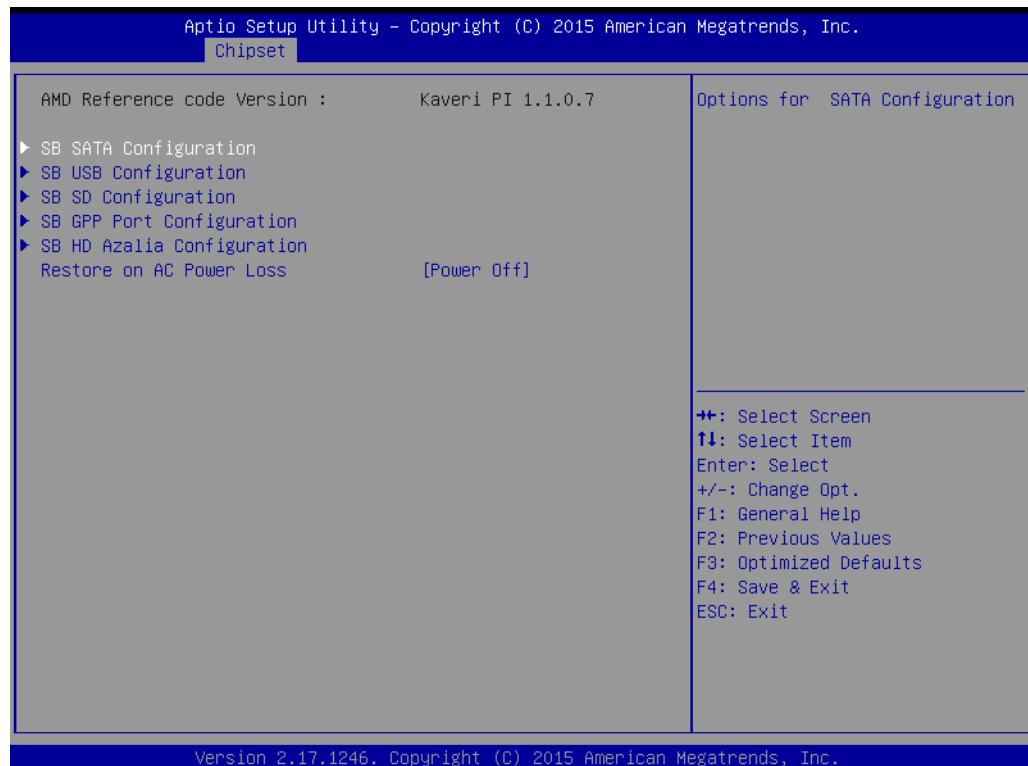

Figure 3.26 South Bridge

■ **Restore on AC Power Loss**

This item allows users to select the options of Restore on AC Power Loss.

■ SB SATA Configuration

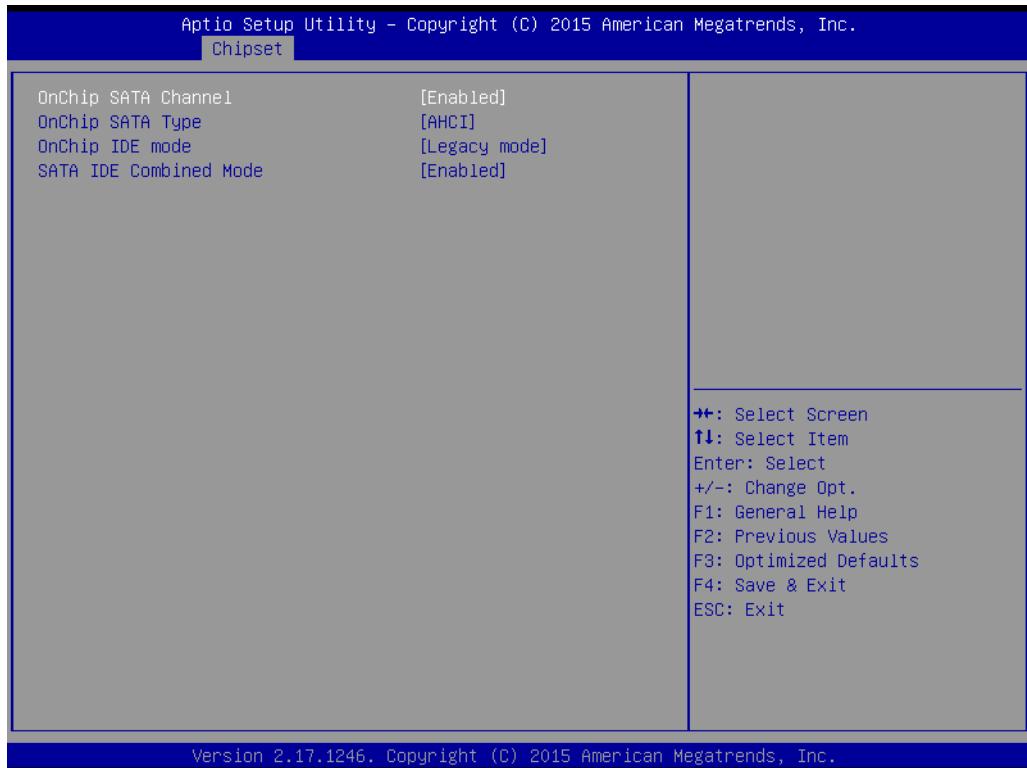

Figure 3.27 SB SATA Configuration

■ Onchip SATA Channel

This item allows users to enable or disable Onchip SATA Channel.

■ Onchip SATA Type

This item allows users to select Onchip SATA Type.

(Native IDE /n RAID /n AHCI /n AHCI /n Legacy IDE /n IDE → AHCI /n Hyper-Flash)

■ Onchip IDE mode

This item allows users to select Legacy mode or Native mode.

■ SATA IDE Combined Mode

This item allows users to enable or disable SATA IDE Combined Mode.

■ SB USB Configuration

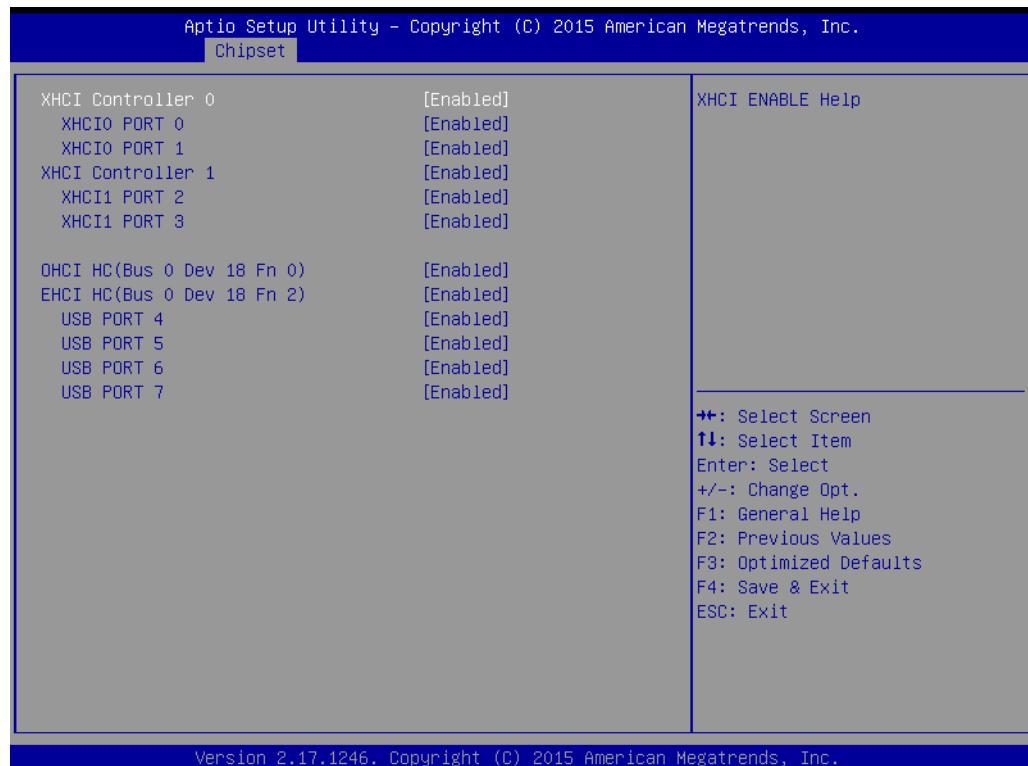

Figure 3.28 SB USB Configuration

This page helps users to enable and set up XHCI.

■ SB SD Configuration

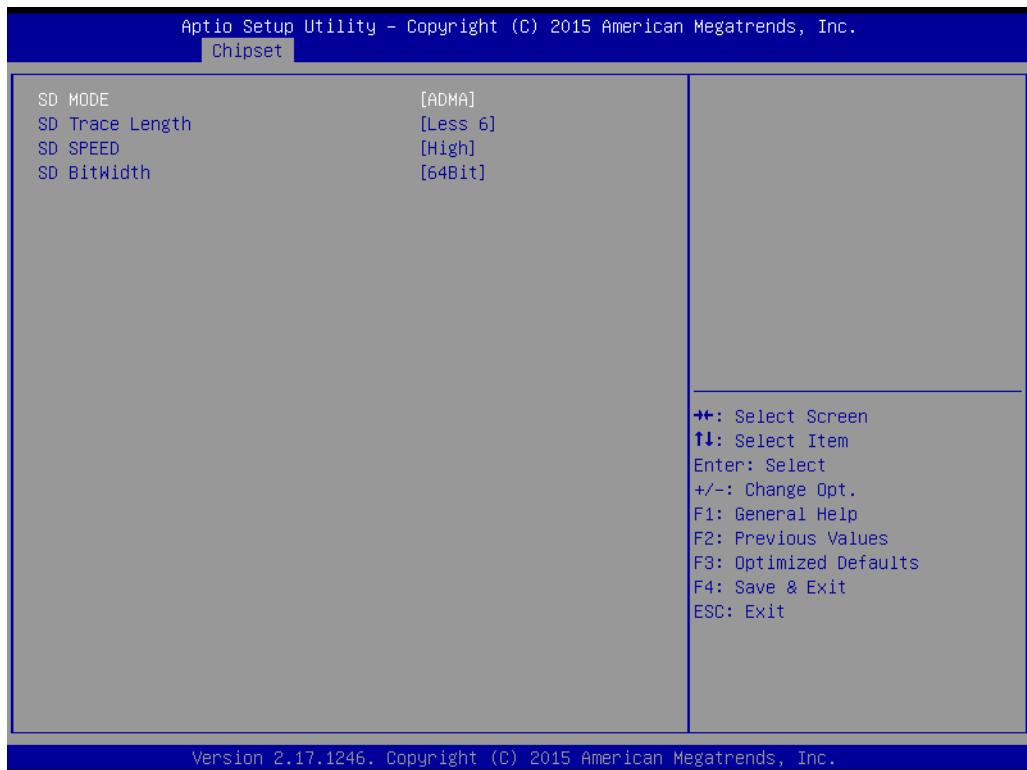

Figure 3.29 SB SD Configuration

This page helps users to select the options of SD.

■ SB GPP Port Configuration

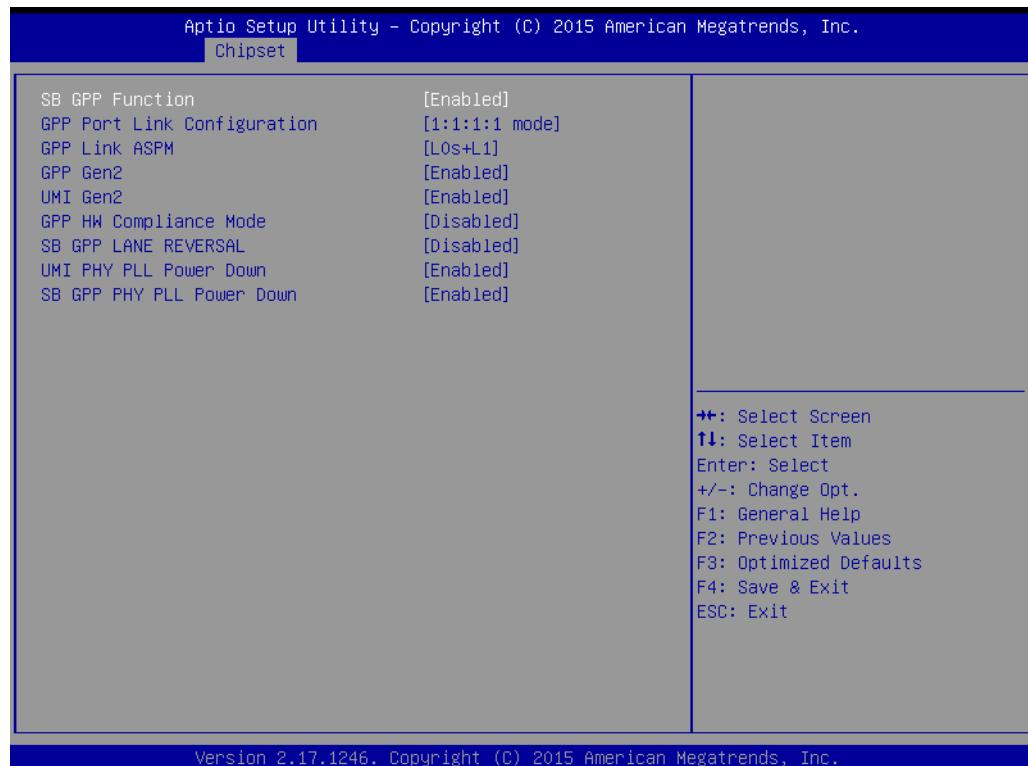

Figure 3.30 SB GPP Port Configuration

This page helps users to select the options for SB GPP Port Config.

■ SB HD Azalia Configuration

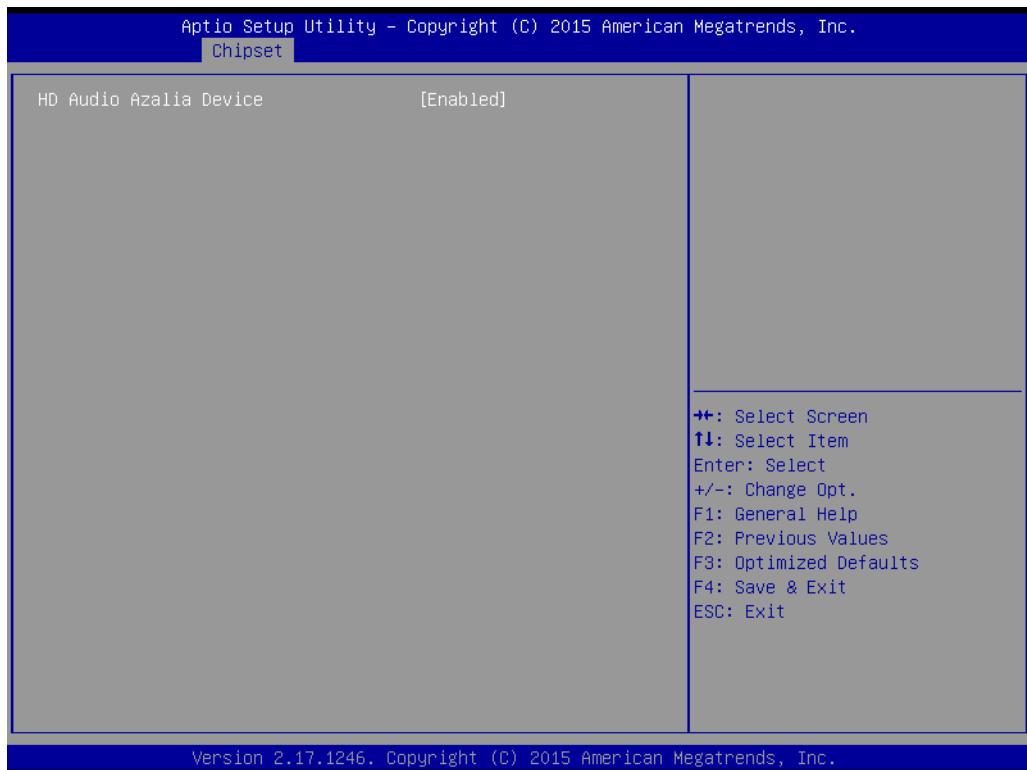

Figure 3.31 SB HD Azalia Configuration

This page helps users to select the options for SB HD Azalia.

3.2.3.3 North Bridge

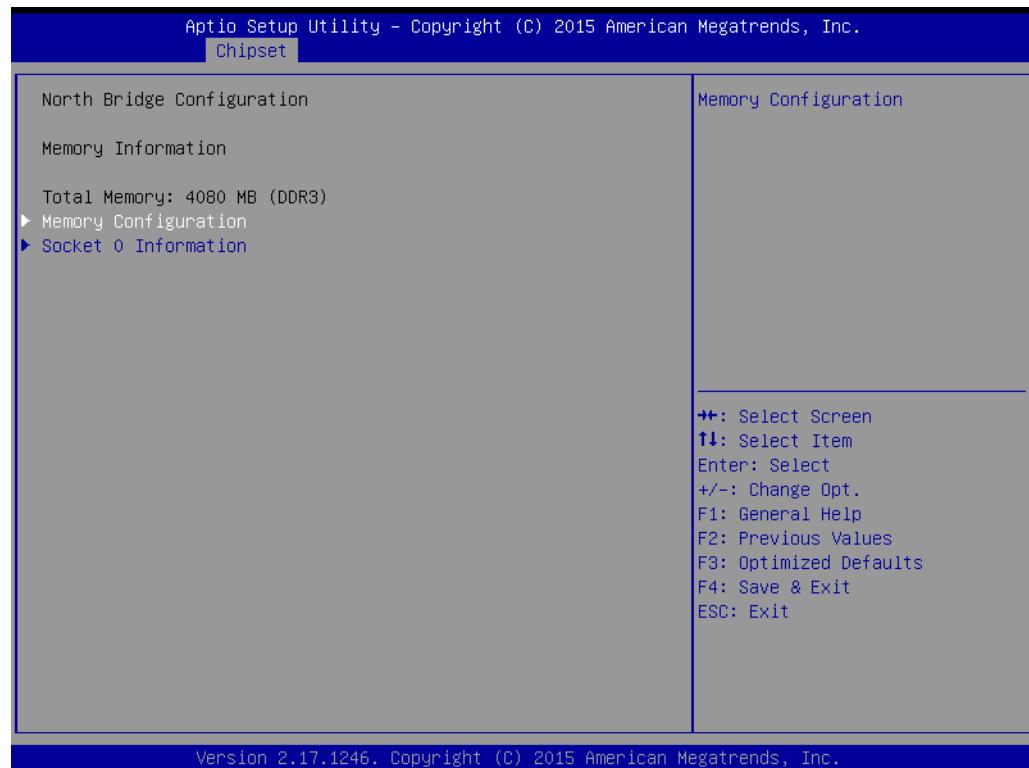

Figure 3.32 North Bridge

■ Memory Configuration

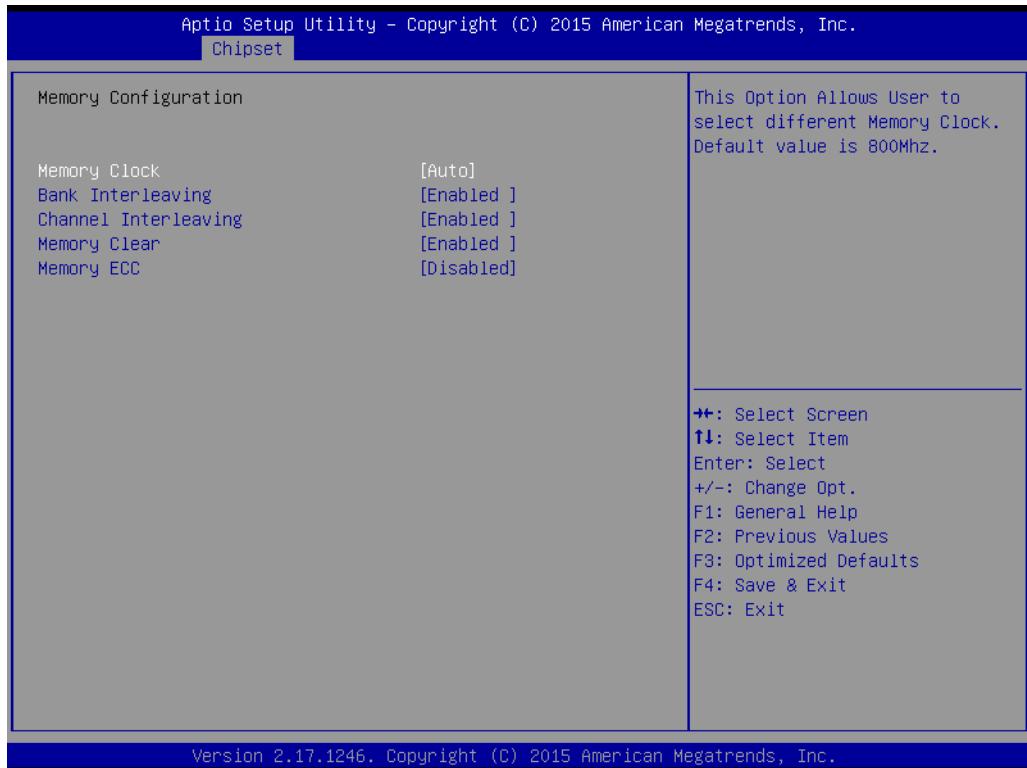

Figure 3.33 Memory configuration

■ Memory Clock

This option allows users to select different memory clock. Default value is 800Mhz.

■ Bank Interleaving

This option allows users to enable or disable Bank Interleaving.

■ Channel Interleaving

This option allows users to enable or disable Channel Interleaving.

■ Memory Clear

This option allows users to enable or disable Memory Clear function.

■ Memory ECC

This option allows users to enable or disable memory ECC.

■ Socket 0 Information

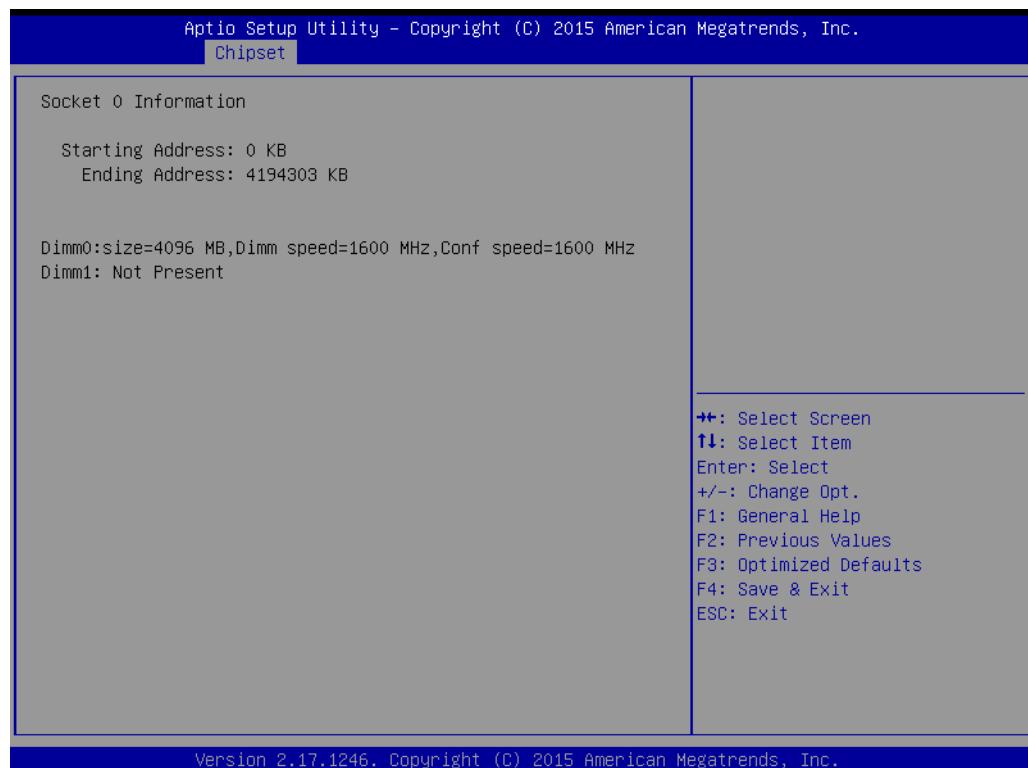

Figure 3.34 Socket 0 information

3.2.4 Boot Settings

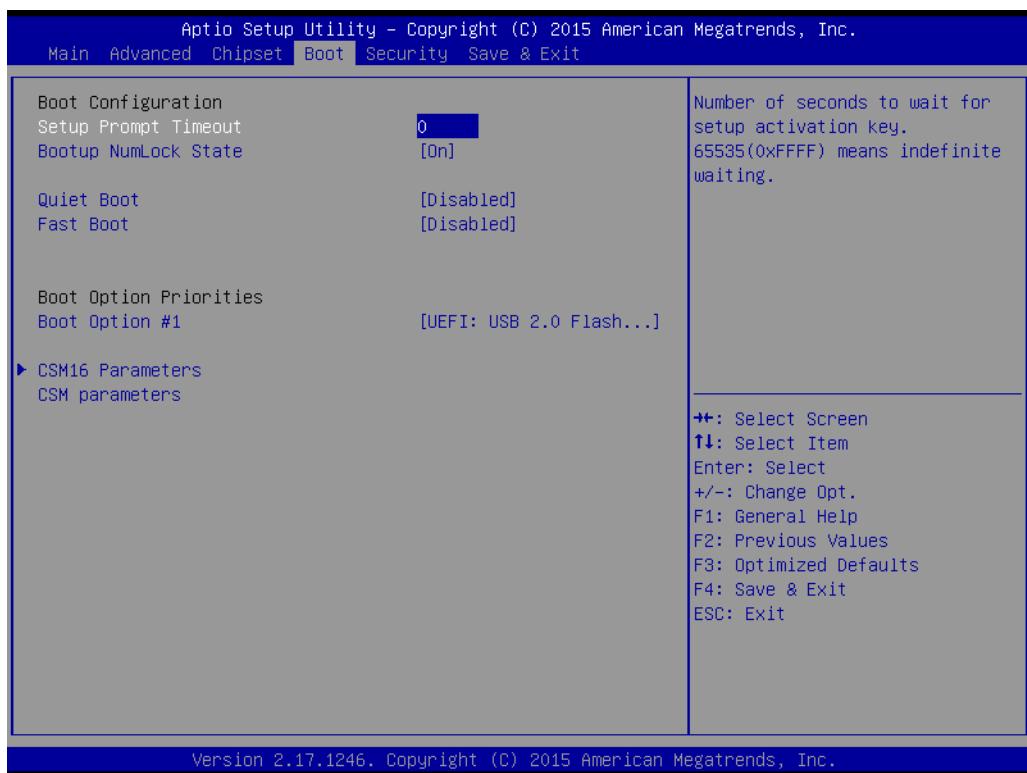

Figure 3.35 Boot Setup Utility

■ Setup Prompt Timeout

This item allows users to select the number of seconds to wait for setup activation key.

■ Bootup NumLock State

This item allows users to select the Power-on state for Numlock.

■ Quiet Boot

If this option is set to Disabled, the BIOS displays normal POST messages.

If enabled, an OEM Logo is shown instead of POST messages.

■ Fast Boot

This item allows users to enable or disable boot with initialization of a minimal set of devices required to launch active boot option. Has no effect for BBS boot options.

3.2.4.1 CSM16 parameters

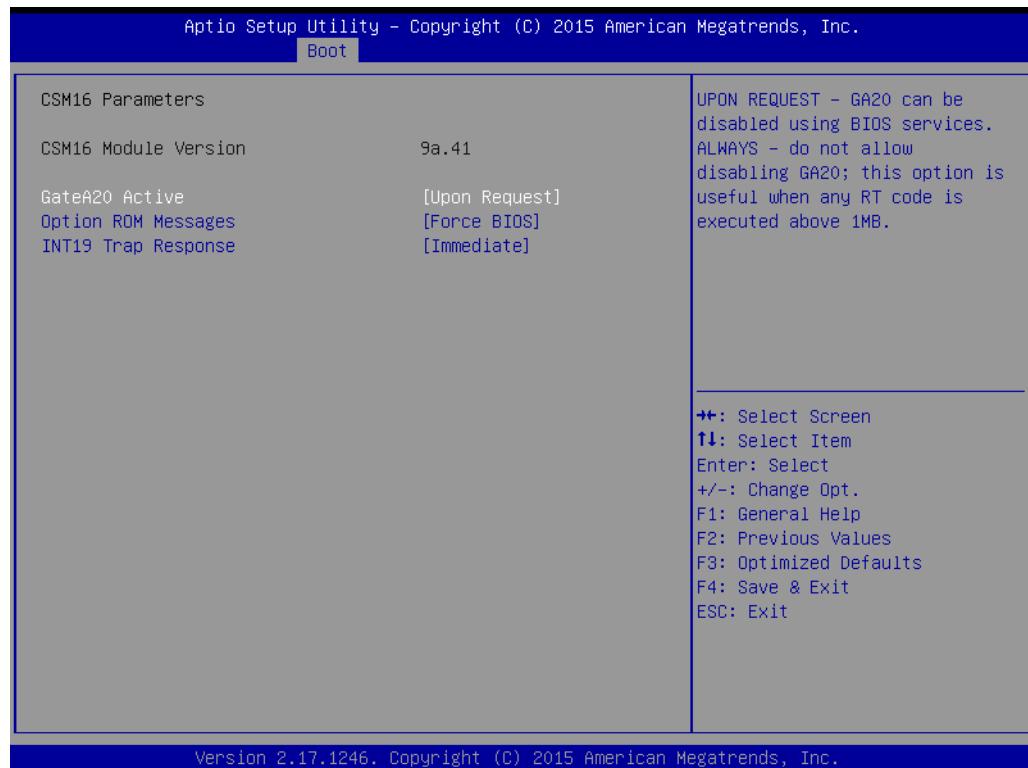

Figure 3.36 CSM16 parameters

■ GateA20 Active

Upon request – GA20 can be disabled using BIOS services.

Always – do not allow disabling GA20; this option is useful when any RT code is executed above 1MB.

■ Option ROM Messages

This item allows users to select option ROM message.

■ InT19 Trap Response

BIOS reaction on INT19 trapping by Option ROM:

IMMEDIATE – execute the trap right away;

POSTPONED – execute the trap during legacy boot.

3.2.4.2 CSM Parameters

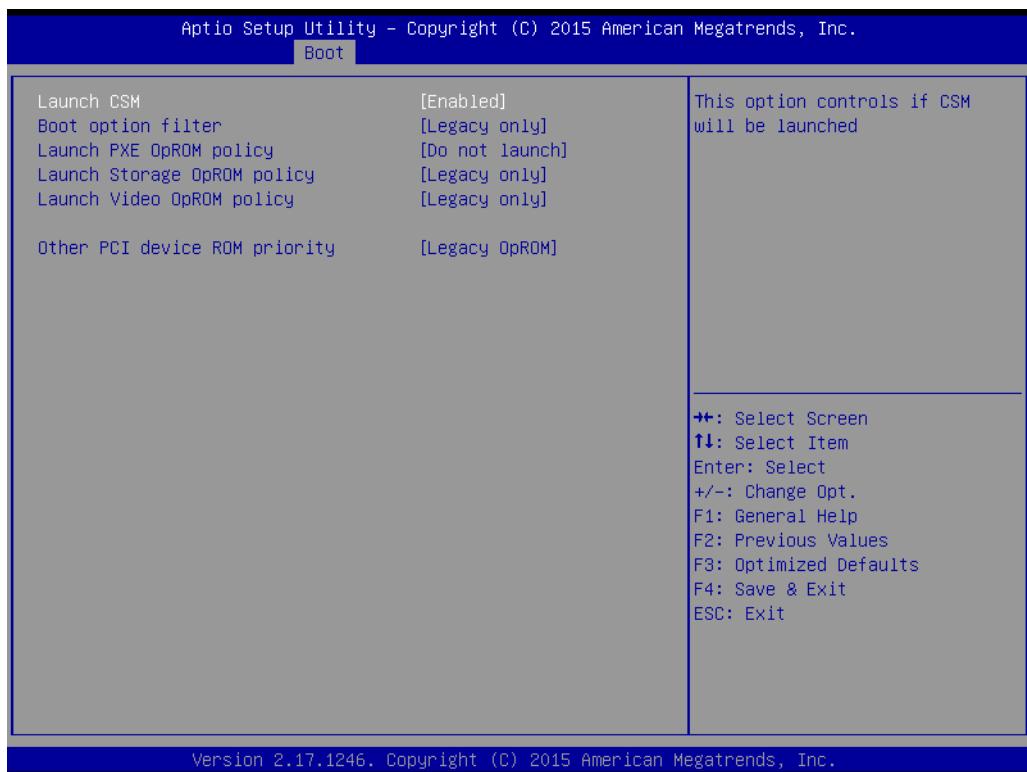

Figure 3.37 CSM parameters

■ Launch CSM

This option controls if CSM will be launched.

■ Boot option filter

This option controls what device system can boot to

■ Launch PXE OpROM policy

This item controls the execution of UEFI and Legacy PXE OpROM.

■ Launch Video OpROM policy

This item controls the execution of UEFI and legacy Video OpROM.

■ Other PCI device ROM priority

For PCI devices other than Network, Mass storage or video defines which OpROM to launch.

3.2.5 Security Setup

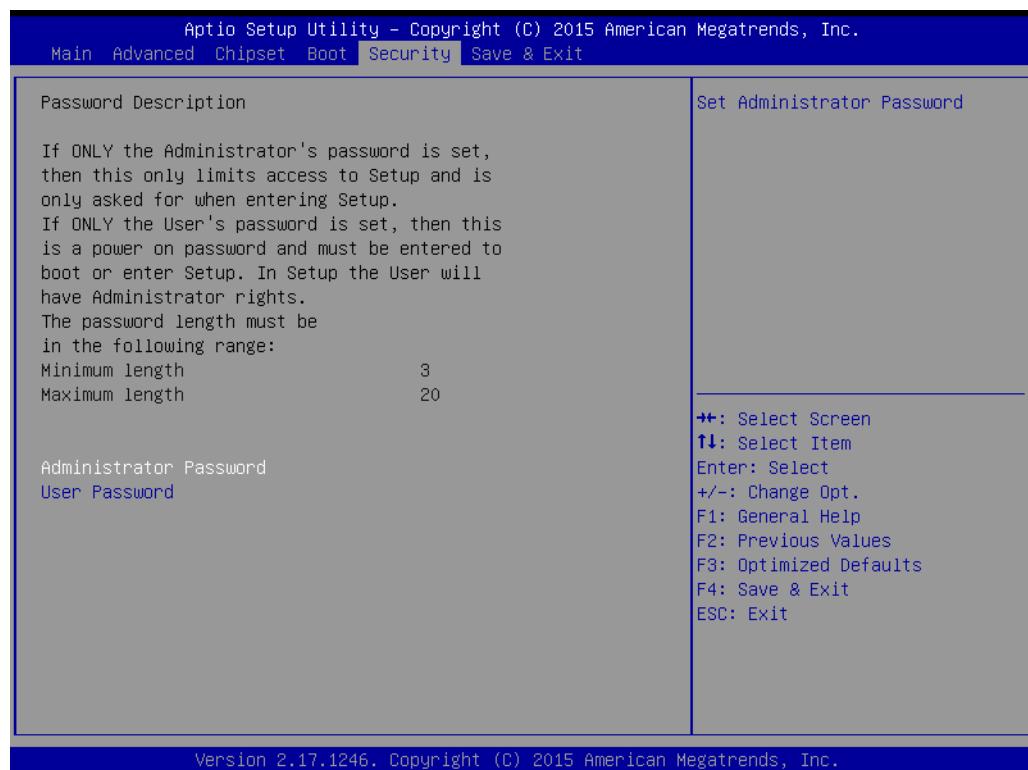

Figure 3.38 Password Description

Select Security Setup from the SOM-5893Setup main BIOS setup menu. All Security Setup options, such as password protection, are described in this section. To access the sub menu for the following items, select the item and press <Enter>:

Change Administrator / User Password: Select this option and press <ENTER> to access the sub menu, and then type in the password.

3.2.6 Save & Exit

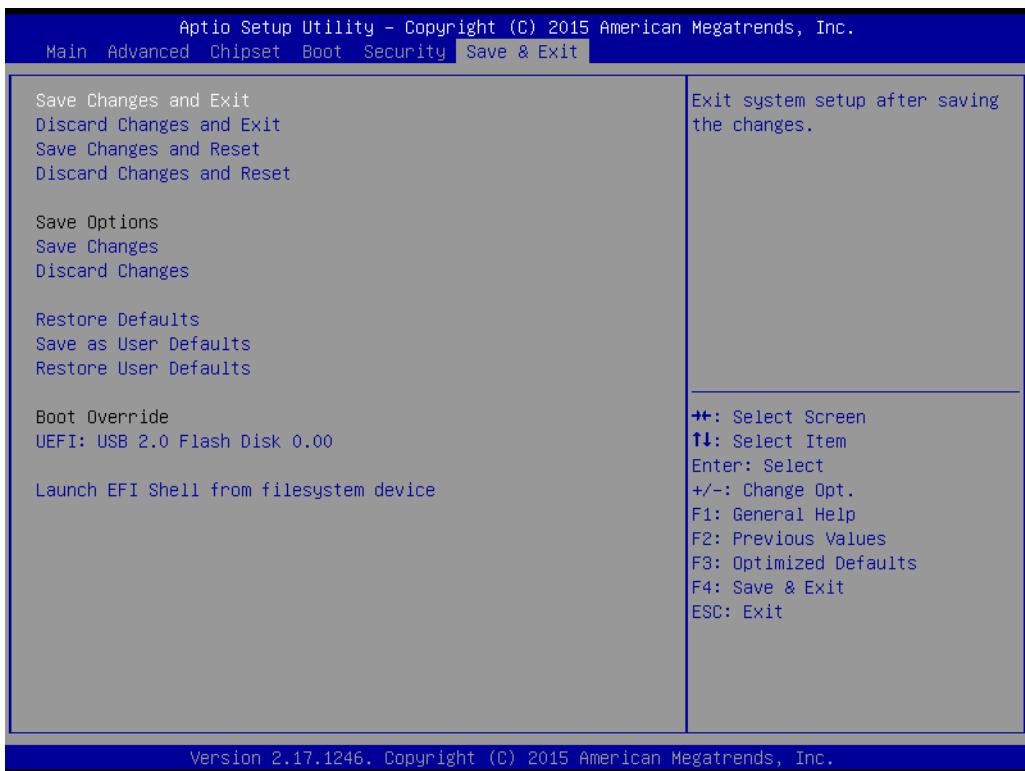

Figure 3.39 Save & Exit

■ Save Changes and Exit

When users have completed system configuration, select this option to save changes, exit BIOS setup menu and reboot the computer if necessary to take effect all system configuration parameters.

■ Discard Changes and Exit

Select this option to quit Setup without making any permanent changes to the system configuration.

■ Save Changes and Reset

When users have completed system configuration, select this option to save changes, exit BIOS setup menu and reboot the computer to take effect all system configuration parameters.

■ Discard Changes and Reset

Select this option to quit Setup without making any permanent changes to the system configuration and reboot the computer.

■ Save Changes

When users have completed system configuration, select this option to save changes without exit BIOS setup menu.

■ Discard Changes

Select this option to discard any current changes and load previous system configuration.

■ Restore Defaults

The SOM-5893 automatically configures all setup items to optimal settings when users select this option. Optimal Defaults are designed for maximum system performance, but may not work best for all computer applications. In partic-

ular, do not use the Optimal Defaults if the user's computer is experiencing system configuration problems.

- **Save as User Defaults**

When users have completed system configuration, select this option to save changes as user defaults without exit BIOS setup menu.

- **Restore User Defaults**

The users can select this option to restore user defaults.

- **Launch EFI Shell from filesystem device**

Attempts to Launch EFI Shell application from one of the available filesystem devices.

Chapter 4

S/W Introduction and Installation

- **S/W Introduction**
- **Driver Installation**
- **Advantech iManager**

4.1 S/W Introduction

The mission of Advantech Embedded Software Services is to "Enhance quality of life with Advantech platforms and Microsoft Windows embedded technology." We enable Windows Embedded software products on Advantech platforms to more effectively support the embedded computing community. Customers are freed from the hassle of dealing with multiple vendors (hardware suppliers, system integrators, embedded OS distributor) for projects. Our goal is to make Windows Embedded Software solutions easily and widely available to the embedded computing community.

4.2 Driver Installation

The Intel® Chipset Software Installation (CSI) utility installs the Windows INF files that outline to the operating system how the chipset components will be configured.

4.2.1 Windows 7 Driver Setup

To install the drivers, please connect to the internet and browse the website and download the drivers that you want to install and follow Driver Setup instructions to complete the installation.

4.2.2 Other OSs

To install the drivers for Linux or other OSs, please connect to internet and browse the website www.advantech.com to download the appropriate driver.

4.3 Advantech iManager

Advantech's platforms come equipped with iManager, a micro controller that provides embedded features for system integrators. Embedded features have been moved from the OS/BIOS level to the board level, to increase reliability and simplify integration. iManager runs whether the operating system is running or not; it can count the boot times and running hours of the device, monitor device health, and provide an advanced watchdog to handle errors just as they happen. iManager also comes with a secure & encrypted EEPROM for storing important security key or other customer define information. All the embedded functions are configured through API and provide corresponding utilities to demonstrate. These APIs comply with PICMG EAPI (Embedded Application Programmable Interface) specification and unify in the same structures. It makes these embedded features easier to integrate, speed up developing schedule, and provide the customer's software continuity while upgrade hardware. For more details of how to use the APIs and utilities, please refer to Advantech iManager 2.0 Software API User Manual.

Control	Monitor
GPIO 	Watchdog  <p>A watchdog timer (WDT) is a device that performs a specific operation after a certain period of time if something goes wrong and the system does not recover on its own. A watchdog timer can be programmed to perform a warm boot (restarting the system) after a certain number of seconds.</p>
SMBus 	Hardware Monitor  <p>The Hardware Monitor (HWM) API is a system health supervision API that inspects certain condition indexes, such as fan speed, temperature and voltage.</p>
I²C 	Hardware Control  <p>The Hardware Control API allows developers to set the PWM (Pulse Width Modulation) value to adjust fan speed or other devices; it can also be used to adjust the LCD brightness.</p>
Display	Power Saving
Brightness Control 	CPU Speed  <p>Make use of Intel SpeedStep technology to reduce power consumption. The system will automatically adjust the CPU Speed depending on system loading.</p>
Backlight 	System Throttling  <p>Refers to a series of methods for reducing power consumption in computers by lowering the clock frequency. These APIs allow the user to lower the clock from 87.5% to 12.5%.</p>

A **Appendix**

Pin Assignment

This appendix gives you the information about the hardware pin assignments of the SOM-5893 CPU computer-on-module.

- SOM-5893 Type 6 Pin Assignments

A.1 SOM-5893 Type 6 Pin Assignments

This section gives SOM-5893 pin assignments on COM Express connector, which are compliant with COMR.0 R2.1 Type 6 pin-out definitions. For more detail about how to use these pins and get design reference, please contact Advantech for the design guide, checklist, reference schematic, and other hardware/software support.

Appendix B

Watchdog Timer

This appendix gives you the information about the watchdog timer programming on the SOM-5893 CPU computer-on-module.

■ Watchdog Timer Programming

B.1 Programming the Watchdog Timer

Trigger Event	Note
IRQ	IRQ5, 7, 14 (BIOS setting default disable)**
NMI	N/A
SCI	Power button event
Power Off	Support
H/W Restart	Support
WDT Pin Activate	Support

** WDT new driver support automatically selects an available IRQ number from BIOS, and then sets to EC. Only Win XP, Win7 and Win8 support it.

In other OSs, it will still use an IRQ number from BIOS setting as usual.

For details, please refer to *iManager & Software API User Manual*.

Appendix C

Programming GPIO

This Appendix gives an illustration of General Purpose Input and Output pin settings.

- System I/O Ports

C.1 GPIO Register

GPIO Byte Mapping	H/W Pin Name
BIT0	GPO0
BIT1	GPO1
BIT2	GPO2
BIT3	GPO3
BIT4	GPIO0
BIT5	GPIO1
BIT6	GPIO2
BIT7	GPIO3

For details, please refer to *iManager & Software API User Manual*.

Appendix D

System Assignments

This appendix gives you information about the system resource allocations on the SOM-5893 CPU computer-on-module.

- System I/O ports
- DMA Channel Assignments
- Interrupt Assignments
- 1st MB Memory Map

D.1 System I/O Ports

Table D.1: System I/O ports

Addr.range (Hex)	Device
0x000003F8-0x000003FF	Communications Port (COM1)

Table D.1: System I/O ports

0x00000067-0x0000006F	Motherboard resources
0x00000067-0x0000006F	Motherboard resources
0x0000040B-0x0000040B	Motherboard resources
0x000004D6-0x000004D6	Motherboard resources
0x00000C00-0x00000C01	Motherboard resources
0x00000C14-0x00000C14	Motherboard resources
0x00000C50-0x00000C51	Motherboard resources
0x00000C52-0x00000C52	Motherboard resources
0x00000C6C-0x00000C6C	Motherboard resources
0x00000C6F-0x00000C6F	Motherboard resources
0x00000CD0-0x00000CD1	Motherboard resources
0x00000CD2-0x00000CD3	Motherboard resources
0x00000CD4-0x00000CD5	Motherboard resources
0x00000CD6-0x00000CD7	Motherboard resources
0x00000CD8-0x00000CDF	Motherboard resources
0x00000800-0x0000089F	Motherboard resources
0x00000B20-0x00000B3F	Motherboard resources
0x00000900-0x0000090F	Motherboard resources
0x00000910-0x0000091F	Motherboard resources
0x0000FE00-0x0000FEFE	Motherboard resources
0x000001F0-0x000001F7	ATA Channel 0
0x000003F6-0x000003F6	ATA Channel 0
0x00000081-0x00000083	Direct memory access controller
0x00000087-0x00000087	Direct memory access controller
0x00000089-0x0000008B	Direct memory access controller
0x0000008F-0x0000008F	Direct memory access controller
0x000000C0-0x000000DF	Direct memory access controller
0x0000C000-0x0000CFFF	PCI Express standard Root Port
0x00000170-0x00000177	ATA Channel 1
0x00000376-0x00000376	ATA Channel 1
0x0000F100-0x0000F10F	AMD PCI IDE Controller
0x00000378-0x0000037F	ECP Printer Port (LPT1)
0x00000778-0x0000077F	ECP Printer Port (LPT1)
0x000000F0-0x000000FF	Numeric data processor

D.2 DMA Channel Assignments

Table D.2: DMA channel assignments

Channel	Function
3	ECP Printer Port (LPT1)
4	Direct memory access controller

D.3 Interrupt Assignments

Table D.3: Interrupt assignments

Interrupt#	Interrupt source
IRQ 0	System timer
IRQ 1	Standard PS/2 Keyboard
IRQ 3	Communications Port (COM2)
IRQ 4	Communications Port (COM1)
IRQ 7	SUSI4 Driver
IRQ 8	High precision event timer
IRQ 10	Communications Port (COM4)
IRQ 11	Communications Port (COM3)
IRQ 12	PS/2 Compatible Mouse
IRQ 13	Numeric data processor
IRQ 14	ATA Channel 0
IRQ 15	ATA Channel 1
IRQ 16	SDA Standard Compliant SD Host Controller & High Definition Audio Controller
IRQ 17	Standard Enhanced PCI to USB Host Controller
IRQ 18	Standard OpenHCD USB Host Controller
IRQ 19	AMD SATA Controller
IRQ 27	High Definition Audio Controller

D.4 1st MB Memory Map

Table D.4: 1st MB Memory Map

Addr. range (Hex)	Device
0xFEB68000-0xFEB69FFF	AMD USB 3.0 Host Controller
0xFEB71000-0xFEB71FFF	Standard OpenHCD USB Host Controller
0xFEB60000-0xFEB63FFF	High Definition Audio Controller
0xFEB6F000-0xFEB6FFFF	Standard OpenHCD USB Host Controller
0xFEA00000-0xFEA1FFFF	Intel(R) I211 Gigabit Network Connection
0xFEA00000-0xFEA1FFFF	PCI Express standard Root Port
0xFEA20000-0xFEA23FFF	Intel(R) I211 Gigabit Network Connection
0xA0000-0xBFFFF	PCI bus
0xA0000-0xBFFFF	AMD Radeon(TM) R7 Graphics
0xC0000-0xDFFFF	PCI bus
0x90000000-0xFED3FFFF	PCI bus
0x90000000-0xFED3FFFF	AMD Radeon(TM) R7 Graphics
0xFED45000-0xFFFFFFFF	PCI bus
0xFEB6D000-0xFEB6DFFF	Standard OpenHCD USB Host Controller
0xA0000000-0xA07FFFFFF	AMD Radeon(TM) R7 Graphics
0xFEB00000-0xFEB3FFFF	AMD Radeon(TM) R7 Graphics
0xE0000000-0xFFFFFFFF	System board
0xFE000000-0xFE9FFFFFF	PCI Express standard Root Port
0xC0800000-0xD07FFFFFF	PCI Express standard Root Port
0xFEB72000-0xFEB727FF	AMD SATA Controller
0x70000000-0x8FFFFFFF	Motherboard resources
0xFEB80000-0xFEBFFFFFF	Motherboard resources
0xFD600000-0xFDFFFFFF	PCI Express standard Root Port
0xA0800000-0xC07FFFFFF	PCI Express standard Root Port
0xFEB70000-0xFEB700FF	Standard Enhanced PCI to USB Host Controller
0xFEC00000-0xFEC00FFF	Motherboard resources
0xFEE00000-0xFEE00FFF	Motherboard resources
0xFED80000-0xFED8FFFF	Motherboard resources
0xFED61000-0xFED70FFF	Motherboard resources
0xFEC10000-0xFEC10FFF	Motherboard resources
0xFF000000-0xFFFFFFFF	Motherboard resources
0xFED00000-0xFED003FF	High precision event timer
0xFEB6C000-0xFEB6C0FF	SDA Standard Compliant SD Host Controller
0xFEB6E000-0xFEB6E0FF	Standard Enhanced PCI to USB Host Controller
0xFEB6A000-0xFEB6BFFF	AMD USB 3.0 Host Controller
0xFEB64000-0xFEB67FFF	High Definition Audio Controller
